

### **Income and Earnings**

Includes: Weekly earnings in main job and Main source of income

### **Unemployment**

Includes: Reason for unemployment and Whether looking for full-time or part-time work

### **Duration of Unemployment**

Includes: Duration of unemployment and Duration of unemployment since last full-time job

### **Not in the Labour Force**

Includes: Reason not in the labour force and Main activity when not in the labour force

### **Retirement**

Includes: Retirement status and Retirement intentions

### **Weighting and Benchmarks**

Includes: Weights and Population counts.

## **About this Release**

The Longitudinal Labour Force Microdata is available via the Remote Access Data Laboratory (RADL) and ABS Data Laboratory (ABSDL)

Apply online for access to these products at [www.abs.gov.au/about/microdata](http://www.abs.gov.au/about/microdata).

These products provide data on labour force status, employment status, hours worked, underemployment status, industry and occupation or main/last job, income and earnings, unemployment status, duration of unemployment, not in the labour force (NILF) status, retirement status, as well as relevant standard demographic, family, educational, and other details and characteristics. A detailed list of data items is available on the Downloads tab.

The longitudinal microdata enables users to tabulate, manipulate and analyse data over time. Steps to confidentialise the dataset are taken to ensure the integrity of data and maintain confidentiality of respondents. This includes removing any information that might uniquely identify an individual, reducing the level of detail for some items and collapsing some categories.

Approved users can combine information about people's labour force status, demographic and socio-economic details with other household members to enable in-depth studies of the social and economic aspects of labour market participation over time. The LLFS data is provided as a 'flat' file, arranged in a hierarchy made up of the following 4 levels:

1. Month in survey
2. Household
3. Family
4. Person

  - Record ID [ABSRID]
  - Household ID [ABSHID]
  - Family ID [ABSFID]
  - Person ID [ABSPID]

#### Month Identifiers

Survey month ID [ABSMID]  
First month of selection in survey [ABSFMTM]  
Number of months captured in survey [ABSNMTH]

#### Geography

State or territory of selection and interview [STATSLCE]  
State or territory of usual residence [STATURCE]

#### Survey

Respondent detail [RESPTYPC]  
Residence status [URSTATC]

#### Demography

Sex [SEX]  
Age [AGECE]  
Age group [AGECB]  
Social marital status [SOCMARCE]  
Country of birth (SACC 2011) [COBCE]  
Year of arrival [YOACE]

#### Household and Family

Household/Dwelling level characteristics  
Family composition of household [FAMCHHCE]  
Number of people in household (including visitors) [HHNUMWVC]  
Number of usual residents in household (excludes visitors) [HHNUMURC]

#### Family level characteristics

Family composition [FAMCOMCE]  
Number of family members in family [FAMNUMC]

#### Person level characteristics

Relationship in household [RELHHCE]  
Number of children aged 0 to 4 years [FAMNINFC]  
Number of children aged 0 to 14 years [FAMNKIDC]  
Number of dependent students aged 15 to 24 years [FAMNDPSC]  
Number of dependants aged 0 to 24 years [FAMNDEPC]  
Number of non-dependent children aged 15 years and over [FAMNNDPC]  
Age of youngest child [AGEYNGC]

#### Education

Educational attendance (full-time) [EDUSTATC]  
Educational enrolment [EDUENROC]  
Type of educational institution [EDINSTCE]  
Highest year of school completed (ASCED 2001) [HYRSCHCE]  
Level of highest non-school qualification (ASCED 2001) [LVHNSQCE]  
Main field of highest non-school qualification (ASCED 2001) [MFHNSQCE]

#### Employment

Labour force status [LFSTATCE]  
Full-time or part-time status of employment [FTPTEMP]  
Status in employment [STATEMCE]  
Whether considered job to be casual [JOBCASUC]  
Employment type [EMPTYPCE]  
Whether an independent contractor [INDCONT]  
Whether held more than one job [MULTJOBC]

#### Hours Worked

Hours worked last week in all jobs [HRSWRKCE]  
Hours worked last week in main job [HRAWMJCE]  
Hours usually worked in all jobs [HRUWAJC]

#### Underemployment

Underemployment status [UNDREMP]  
Reason worked less than 35 hours [ABSENCEC]  
Whether part-time and looking for and available to work more hours [LAMHFUTC]

#### Duration of Employment

Tenure of employment [TENUREC]  
Whether employment is ongoing [ONGOINGC]

#### Industry and Occupation

Sector of main job [SECTRMJC]  
Industry of main/last job (ANZSIC 2006 Division) [IND\_06CB]  
Industry of main/last job (ANZSIC 2006 Expanded) [IND\_06CE]  
Occupation of main/last job (ANZSCO 2006 Major group) [OCC\_06CB]  
Occupation of main/last job (ANZSCO 2006 Sub-major group) [OCC\_06CE]  
Trade union membership [TUMMJC]

#### Income and Earnings

Current weekly gross personal income from all sources [WINCALCE]  
Weekly earnings in main job [WINCMJCE]  
Main source of income [PRNINCCE]

#### Unemployment

Full-time or part-time status of unemployment [FTPTUNC]  
Whether worked full-time for 2 weeks or more [FTJSTATC]  
Reason for unemployment (basic) [REASUNCB]  
Reason for unemployment (expanded) [REASUNCE]

#### Duration of Unemployment

Duration of unemployment (since any previous work - basic) [DURUNCB]

Duration of unemployment (since any previous work - expanded) [DURUNCE]  
Duration of unemployment (since any previous full-time work - basic) [DURUNFCB]  
Duration of unemployment (since any previous full-time work - expanded) [DURUNFCE]  
Not in the Labour Force  
Reason for not in the labour force [NLFSTATC]  
Main activity when not in the labour force [NLFMNACC]  
Whether wanted to work [NLFWWRKC]  
Whether available to start work and with marginal attachment [NLFMGATC]  
Reason for ceasing last job [REASNLFC]  
Retirement  
Retirement status [RETSTATC]  
Age intends to retire [RETAGEC]  
Intentions to retire from the labour force [RETPLANC]  
Weighting and Benchmarks  
Weight for the current month [WEIGHT]  
Population count [POPCNTC]

## Introduction

### INTRODUCTION

[Next Section: Survey Methodology >>](#)

#### INTRODUCTION

This product provides a range of information about the release of microdata from the monthly Labour Force Survey (LFS) for the period January 2008 to December 2010. Respondents in the LFS are selected for a period of 8 consecutive months, and their responses have been linked across time to provide detailed longitudinal microdata.

Microdata are the most detailed information available from a survey and are generally the responses to individual questions on the questionnaire, or data derived from two or more questions.

Periodically, some LFS respondents are also selected in the supplementary survey program. These surveys provide additional data items that are not collected in the main LFS, such as educational attainment and income. A selection of these data items from the supplementary surveys have also been appended to the longitudinal records. A detailed Data Item List is provided for all of the data items used in the CURF, as well as explanations of the File Structures used to link the data items together.

Further details are provided about the Survey Methodology used in the LFS and the supplementary survey program, and information on Using the CURF and the Conditions of Use are also provided.

The microdata and the degree of detail provided in the dataset are released with the approval of the Australian Statistician.

### INTRODUCTION

[Next Section: Survey Methodology >>](#)

#### AVAILABLE PRODUCTS

The Longitudinal Labour Force Survey dataset is available as a Confidentialised Unit Record File (CURF) via the Remote Access Data Laboratory (RADL) and ABS Data Laboratory (ABSDL)

Further information about this service, and other information to assist users in understanding and accessing CURFs in general, is available from the CURF Microdata Entry Page on the ABS web site.

Before you apply for access, users should read and familiarise themselves with the information contained in this product and the User Manual: Responsible Use of ABS CURFs (cat. no. 1406.0.55.003).

To apply for access, press the green button below:

[Apply for Microdata](#)

## Further Information

#### FURTHER INFORMATION

Further information about the survey and the microdata products can be found in this product:

- A detailed list of data items in the LLFS CURF is available from the left hand menu under Data Item List
- The Data Item List is also available as an Excel spreadsheet or Plain text file on the Downloads tab
- The Quality Declaration, Abbreviations and Index relating to these products can be found in the Explanatory Notes tab
- Other related products and publications can be found on the Related Information tab.

## Data available on request

[Contents >> Introduction >> Data available on request](#)

### INTRODUCTION

[Next Section: Survey Methodology >>](#)

#### DATA AVAILABLE ON REQUEST

Data obtained in the survey but not contained on the CURF may be available from the ABS, on request, as statistics in tabulated form.

Subject to confidentiality and sampling variability constraints, special tabulations can be produced incorporating data items, populations and geographic areas selected to meet individual requirements. These are available on request, on a fee for service basis.

Contact the National Information and Referral Service on 1300 135 070 or [client.services@abs.gov.au](mailto:client.services@abs.gov.au) for further information.

## Survey Methodology

### SURVEY METHODOLOGY

[<< Previous Section: Introduction](#)

[Next Section: File Structure >>](#)

#### INTRODUCTION

The Longitudinal Labour Force Survey (LLFS) CURF is comprised of data collected from a number of different surveys in the Monthly Population Survey (MPS) program. Each survey has slightly differing methodology and practices, depending on the application and the populations targeted, but the core elements of each align with the methodology used in the monthly Labour Force Survey (LFS), which forms the backbone of the MPS.

This section briefly outlines the methodology of the LFS and lightly touches on the supplementary surveys, but mainly focuses on concepts that are specific to the LLFS CURF as a whole.

More information regarding the survey methodology specific to each survey are provided below:

- Labour Force, Australia (LFS, cat. no. 6202.0)
- Education and Work, Australia (SEW, cat. no. 6227.0)
- Underemployed Workers, Australia (UEW, cat. no. 6265.0)
- Persons Not in the Labour Force, Australia (PNILF, cat. no. 6220.0)
- Employee Earnings, Benefits and Trade Union Membership, Australia (EEBTUM, cat. no. 6310.0)
- Forms of Employment, Australia (FOES, cat. no. 6359.0)
- Labour Mobility, Australia (LMS, cat. no. 6209.0)
- Multipurpose Household Survey (MPHS, cat. no. 4100.0)

- Retirement and Retirement Intentions, Australia (RRI, cat. no. 6238.0)

This section contains the following subsection :

Concepts, sources and methods  
Scope  
Coverage  
Sample design  
Data collection

### SURVEY METHODOLOGY

[<< Previous Section: Introduction](#)

[Next Section: File Structure >>](#)

#### CONCEPTS, SOURCES AND METHODS

The conceptual framework used in Australia's Labour Force Survey (LFS) aligns closely with the standards and guidelines set out in Resolutions of International Conferences of Labour Statisticians.

Descriptions of the underlying concepts and structure of Australia's labour force statistics, and the sources and methods used in compiling the estimates, are presented in Labour Statistics: Concepts, Sources and Methods (cat. no. 6102.0.55.001)

[Previous Page](#)

[Next Page](#)

## Scope

[Contents >> Survey Methodology >> Scope](#)

### SURVEY METHODOLOGY

[<< Previous Section: Introduction](#)

[Next Section: File Structure >>](#)

#### SCOPE

The scope of the Labour Force Survey (LFS) includes all persons aged 15 years and over, except:

- members of the permanent defence forces;
- certain diplomatic personnel of overseas governments customarily excluded from census and estimated population counts;
- overseas residents in Australia; and
- members of non-Australian defence forces (and their dependants) stationed in Australia.

The Jervis Bay Territory, the Australian Antarctic Territory, and the Territories of Christmas Island and Cocos (Keeling) Islands are also excluded, as is customary for ABS Household Surveys.

Supplementary surveys also have further exclusions, which are generally related to specifically targeting the populations of interest. For example, the Retirement and Retirement Intentions, Australia (cat. no. 6238.0) Survey further restricts the scope to people aged 45 years and over, as this is the relevant population that is targeted for a survey about retirement and retirement intentions.

Other typical exclusions in the supplementary surveys include :

- people living in very remote parts of Australia; and
- people living in non-private dwellings such as hotels, university residences, students at boarding schools, patients in hospitals, residents of homes (e.g. retirement homes, homes for people with disabilities), and inmates of prisons.

(Note: These people are **not** excluded from the main LFS).

In addition, supplementary surveys are only asked of seven-eighths of the LFS, with the exception of the Multipurpose Household Survey and its topics, which is only asked from a selected person from households in the outgoing rotation group (one-eighths of the LFS sample). Refer to the relevant supplementary survey publications for further information regarding exclusions.

No further exclusions have been applied to the Longitudinal Labour Force Survey (LLFS) CURF. Each respondent in the monthly LFS has been included in the LLFS CURF.

# Coverage

[Contents >> Survey Methodology >> Coverage](#)

## SURVEY METHODOLOGY

[<< Previous Section: Introduction](#)

[Next Section: File Structure >>](#)

### COVERAGE

Coverage rules are applied in the LFS which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The coverage rules are necessarily a balance between theoretical and operational considerations. Nevertheless, the chance of a person being enumerated at two separate dwellings in the survey is considered to be negligible.

People who are away from their usual residence for six weeks or less at the time of interview are still included in the survey. The labour force survey is asked from Any Responsible Adult (ARA) on behalf of all members in the household aged over 15, including those who have been away for less than 6 weeks.

The coverage rules applied in the LFS also apply to respondents in the supplementary surveys.

[Next Page](#)

# Sample design

[Contents >> Survey Methodology >> Sample design](#)

## SURVEY METHODOLOGY

[<< Previous Section: Introduction](#)

[Next Section: File Structure >>](#)

### SAMPLE DESIGN

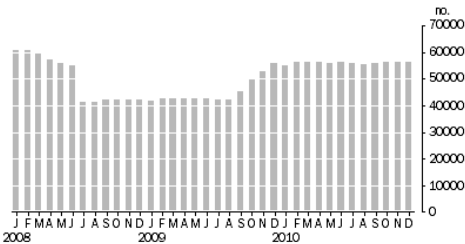

The Labour Force Survey (LFS) is based on a multi-stage area sample of private dwellings (currently approximately 29,000 houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.), and covers approximately 0.33% of the civilian population of Australia aged 15 years and over.

The current Labour Force Survey sample has been selected using information collected in the 2006 Census of Population and Housing. While the design has remained broadly the same since the introduction of the LFS, the review ensures that the survey continues to accurately reflect the geographic distribution of the Australian population, and remains efficient and cost-effective.

The majority of this sample was phased in over the period November 2007 to June 2008, with one-eighth of this portion of the sample being introduced every month. Such a pattern of implementation means that any changes to labour force estimates due to differences between the two samples, or any other influences, were spread over the eight months. The remainder of the sample (about 20% of the total), which covers less settled areas and non-private dwellings was rotated in full for New South Wales, Western Australia, Northern Territory and Australian Capital Territory in March 2008, and for Victoria, Queensland, South Australia and Tasmania in April 2008.

As one of a range of ABS savings initiatives for the 2008-09 financial year, there was a 24% reduction in the LFS sample size for the period July 2008 to August 2009, relative to the June 2008 sample size. The sample reduction was reversed from September 2009 to December 2009, with December 2009 estimates being the first produced under the fully reinstated sample. This also affected the sample size of the supplementary surveys run over this period. Beware of interpreting results over this span, as the decreased sample size results in more variability in the estimates.

SAMPLE SIZE—Jan 2008 to Dec 2010

For further details, see Information Paper: Labour Force Survey Sample Design (cat. no. 6269.0).

## Data collection

[Contents >> Survey Methodology >> Data collection](#)

### SURVEY METHODOLOGY

[<< Previous Section: Introduction](#)

[Next Section: File Structure >>](#)

## DATA COLLECTION

Information is obtained from the occupants of selected dwellings by specially trained interviewers using computer-assisted interviewing. Information is generally collected from one representative for the household on behalf of all people in the household, known as the Any Responsible Adult (ARA), or proxy, method of interviewing.

Households selected for the Labour Force Survey are interviewed each month for eight months, with one-eighth of the sample being replaced each month. The first interview is conducted face-to-face. Subsequent interviews are conducted by telephone (if acceptable to the respondent). In situations where there are significant cultural or language barriers, a short version of the labour force questionnaire is used to collect key labour force characteristics.

The interviews are generally conducted during the two weeks beginning on the Sunday between the 5th and 11th of each month. The information obtained relates to the week before the interview (i.e. the reference week). Each year, to deal with operational difficulties involved with collecting and processing the Labour Force Survey around the Christmas and New Year holiday period, interviews for December start four weeks after November interviews start, and January interviews start five weeks after December interviews start. As a result, January interviewing may commence as early as the 7th or as late as the 13th, depending on the year. Occasionally, circumstances that present significant operational difficulties for survey collection can result in a change to the normal pattern for the start of interviewing.

The supplementary surveys included are generally collected annually in specific months of the year. These can be either face-to-face or telephone interviews, depending on the respondent's preference and whether the supplementary survey was held during a respondent's first month of selection (which is usually face-to-face). They are generally collected from seven-eighths of the LFS sample - excluding the group that has been in the survey for the full 8 months, but further exclusions can also apply depending on the survey (see Scope).

The Multipurpose Household Survey (MPHS) is a special supplementary survey that is collected every month across a financial year period. The data is collected from a selected person per household in the out-going group of the LFS (the group that has been in the survey for the full 8 months). The responses from each month are then collated into a pooled sample for the financial year. Unlike the LFS and other supplementary surveys, information collected in the MPHS, is obtained directly from the respondent selected for a personal interview, not via an ARA proxy.

[Next Page](#)

## Population benchmarks

[Contents >> Survey Methodology >> Population benchmarks](#)

### SURVEY METHODOLOGY

[<< Previous Section: Introduction](#)

[Next Section: File Structure >>](#)

## POPULATION BENCHMARKS

The Labour Force Survey estimates are calculated in such a way as to add up to the estimate of the civilian population aged 15 years and over (population benchmarks). These are based on the Estimated Resident Population (ERP) series published in Australian Demographic Statistics (cat. no. 3101.0).

For this release of the Longitudinal Labour Force Survey (LLFS) CURF, the population benchmarks are based on the March 2012 edition of ERP. In this edition, the data up to and including December 2010 is based on 'final' estimations of Net Overseas Migration (NOM), Net Interstate Migration (NIM) and natural increase (difference between the number of births and the number of deaths). These estimates of quarterly population growth have been applied to the current 2006 Census population base in order to produce monthly population benchmarks for the period January 2008 to December 2010 for sex by age by state/territory by area of usual residence (see **Population count** [POPCNTC]).

The LLFS CURF benchmarks used in this release match the benchmarks published in the November 2012 release of the main Labour Force, Australia publications (cat. no. 6202.0, cat. no. 6291.0.55.001 and cat. no. 6291.0.55.003), so the cross-sectional ('point-in-time') estimates tabulated from the CURF will closely match the published original estimates.

Tabulations based on data items from the supplementary surveys will not match the officially published estimates in those related publications, as these are be

based on different benchmarks, estimation methods, and population exclusions.

Every five years, the ERP series are revised to incorporate additional information available from the latest Census of Population and Housing (Census). Information from the 2011 Census has yet to be incorporated into the ERP series - these revisions are due for release on 20 June 2013. Following the release 2011 Census based ERP, the Labour Force benchmarks will also be revised to match the new series and are likely to be applied in early 2014 to the main Labour Force, Australia publications. When this happens, the population benchmarks used in this release of the LLFS CURF will not align with the most current ERP therefore the LLFS CURF may be subject to revisions in a future release of the CURF.

[Previous Page](#)

[Next Page](#)

## Estimation method

[Contents >> Survey Methodology >> Estimation method](#)

### SURVEY METHODOLOGY

[<< Previous Section: Introduction](#)

[Next Section: File Structure >>](#)

#### ESTIMATION METHOD

The estimation method used in the Labour Force Survey is Composite Estimation, which was introduced in May 2007. Composite Estimation combines data collected in the previous six months with the current month's data to produce the current month's estimates, thereby exploiting the high correlation between overlapping samples across months in the Labour Force Survey. The Composite Estimator combines the previous and current month's data by applying different factors according to length of time in the survey. After these factors are applied, the seven months of data are weighted to align with current month population benchmarks (see Population benchmarks)

For more details, see the Information Paper: Forthcoming Changes to Labour Force Statistics, 2007 (cat. no. 6292.0).

The **Weight for the current month** [WEIGHT] variables in this release of the Longitudinal Labour Force Survey (LLFS) CURF are the same as the weights used to produce the estimates in the November 2012 editions of the main Labour Force, Australia publications (cat. no. 6202.0, 6291.0.55.001 and 6291.0.55.003). These weights are generated using composite estimation, and cross-sectional (point-in-time) estimates produced from the CURF will closely match the published original estimates.

However, the weights have no relationship to the estimates published in the supplementary survey publications, as these are calculated using different benchmarks and estimation methods. Weights from the supplementary surveys are not provided in the CURF. When calculating estimates based on supplementary survey data items in this CURF, they may not match official estimates produced in the publications corresponding to those supplementary surveys.

[Next Page](#)

## Reliability of estimates

[Contents >> Survey Methodology >> Reliability of estimates](#)

### SURVEY METHODOLOGY

[<< Previous Section: Introduction](#)

[Next Section: File Structure >>](#)

#### RELIABILITY OF ESTIMATES

Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error.

Sampling error occurs because a sample, rather than the entire population, is surveyed. One measure of the likely difference resulting from not including all dwellings in the survey is given by the standard error. There are about two chances in three (67%) that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty (95%) that the difference will be less than two standard errors.

Standard errors for cross-sectional (point-in-time) estimates from the CURF may be calculated by using the spreadsheet contained in Labour Force Survey Standard Errors, Data Cube (cat. no. 6298.0.55.001). which is based on the standard error models detailed in Labour Force Survey Standard Errors, 2005 (cat. no. 6298.0). The models do not provide standard errors for estimates resulting from longitudinal analysis, but the cross-sectional standard errors may be used as an approximate indication.

Furthermore, these models don't account for the smaller sample and population exclusions of the data items collected in the supplementary surveys. The standard errors published in the supplementary publications can be used as a guide to the reliability of estimates derived from those items, refer to Survey Methodology for links to the supplementary survey publications.

Non-sampling error arises from inaccuracies in collecting, recording and processing the data. Every effort is made to minimise reporting error by the careful design of questionnaires, intensive training and supervision of interviewers, and efficient data processing procedures. Non-sampling error also arises because information cannot be obtained from all persons selected in the survey. The Labour Force Survey receives a high level of co-operation from individuals in selected dwellings, with the average response rate over the last year being 96%. Similar levels of co-operation are also observed in the supplementary surveys.

#### INTRODUCTION

This section outlines the structure of the Longitudinal Labour Force Survey (LLFS) CURF, providing details of the hierarchical levels used and the longitudinal and cross-sectional structure.

This section contains the following subsection :

- Level structure
- Data availability by level
- Longitudinal structure
- Cross-sectional structure and supplementary data
- Weighting

[Previous Page](#)

[Next Page](#)

## Level structure

[Contents >> File Structure >> Level structure](#)

### FILE STRUCTURE

[<< Previous Section: Survey Methodology](#)

[Next Section: Using the CURF >>](#)

#### LEVEL STRUCTURE

The Longitudinal Labour Force Survey (LLFS) CURF is provided as a single flat file, which is structured into 3 levels:

- **Household/Dwelling,**
- **Family, and**
- **Person.**

Furthermore, since the LLFS spans multiple time periods, the **Survey month** also acts like an additional level.

Structurally, the three levels are in a hierarchical relationship, although some people are not members of family groups, and are therefore one level below household (e.g. group households, unrelated individuals living in family households - see **Relationship in Household** [RELHCE]). Each person is either a member of a family or a member of a household, and families are groups within households.

Month	Household/Dwelling	Family	Person	
Month 1	Household 1	Family 1	Person 1	: Multiple family household
			Person 2	: Multiple family household
			Person 3	: Multiple family household
		Family 2	Person 4	: Multiple family household
			Person 5	: Multiple family household
		Not a family member	Person 6	: Unrelated Lodger
	Household 2	One family household	Person 1	: One family household
			Person 2	: One family household
			Person 3	: One family household
			Person 4	: One family household
		Not a family member	Person 5	: Visitor
	Household 3	Not a family member	Person 1	: Group Household
		Not a family member	Person 2	: Group Household
		Not a family member	Person 3	: Group Household
	Household 4	Not a family member	Person 1	: Person living alone
	Household 5	Special dwelling	Special dwelling	: Special dwelling

A household may have one family, more than one family, or no families with only unrelated individuals living together or people living alone. Families always have more than one person - people who live alone are not members of a family group. There are 'dummy' or 'Not applicable' data item categories for those instances where someone does not contribute to the family level (typically, a '99' code is used).

For more information on families and how ABS defines family and household characteristics, refer to the publication Family, Household and Income Unit Variables, 2005 (cat. no. 1286.0).

People in special dwellings (see **Residence status** [URSTATC]) are treated as lone individuals with no family characteristics. The records of people in special dwellings are structured in a single level, with each person assigned to a different household, regardless of whether they were interviewed in the same special dwelling. This is because;

- Any relationships that exist between people in a special dwelling are not recorded in the LFS, so no additional information can be gained from grouping people who were interviewed in the same special dwelling.
- Special dwellings are assembled as cross-sectional ('point-in-time') measurements and are not linked longitudinally. This is because there can be no certainty in making links to records across time, as the people interviewed in hotels, prisons, boarding schools, etc. are subject to change.

Refer to Identifiers to learn more about how the different levels are identified in the LLFS CURF.

## Data availability by level

[Contents >>](#) [File Structure >>](#) [Data availability by level](#)

### FILE STRUCTURE

[<< Previous Section: Survey Methodology](#)

[Next Section: Using the CURF >>](#)

### DATA AVAILABILITY BY LEVEL

The Level structure of the Longitudinal Labour Force Survey (LLFS) CURF is provided to allow for some analysis across the levels, although most analysis will relate to the **Person** level, to which most of the data items relate. The **Household/Dwelling** and **Family** levels are mainly provided to outline family and household relationships between the people selected in private dwellings.

#### Household/Dwelling Level

**Record Count: 151,499 Private Households (+ 62,904 Special Dwelling records)**

Households may comprise:

- one lone person
- one family
- one family and related individual(s)
- one family and unrelated individual(s)
- multiple families with or without related individual(s)
- multiple families with or without unrelated individual(s)
- unrelated individuals (Group households)
- Individuals from special dwellings

Data items include:

- First month of selection in survey** [ABSFMTM]
- State or territory of selection and interview** [STATSLCE]
- Family composition of household** [FAMCHHCE]
- Number of people in household (including visitors)** [HHNUMWVC]
- Number of usual residents in household (excludes visitors)** [HHNUMURC]

#### Family

**Record Count: 113,026 Families**

Families are generally defined by the presence of couple and/or parent-child relationships, and may comprise:

- couple families with and without children/dependants
- one parent families with and without children/dependants
- other families (e.g. siblings living together)

Data items include:

- **Family Composition** [FAMCOMCE]
- **Number of family members in family** [FAMNUMC]

## Person

**Record Count: 400,387 People**

This level contains all of the standard demographic characteristics of each person, such as:

- **Sex** [SEX]
- **Age** [AGECE]
- **Social marital status** [SOCMARCE]
- **Country of birth** [COBCE]
- **Year of arrival** [YOACE]
- **State or territory of usual residence** [STATURCE]

The majority of data items and topics relate to the Person level, which include:

- Education
- Employment
- Hours Worked
- Underemployment
- Duration of Employment
- Industry and Occupation
- Income and Earnings
- Unemployment
- Duration of Unemployment
- Not in the Labour Force
- Retirement

More detailed information on data items is available from the Data Item List.

## Longitudinal structure

[Contents >>](#) [File Structure >>](#) [Longitudinal structure](#)

### FILE STRUCTURE

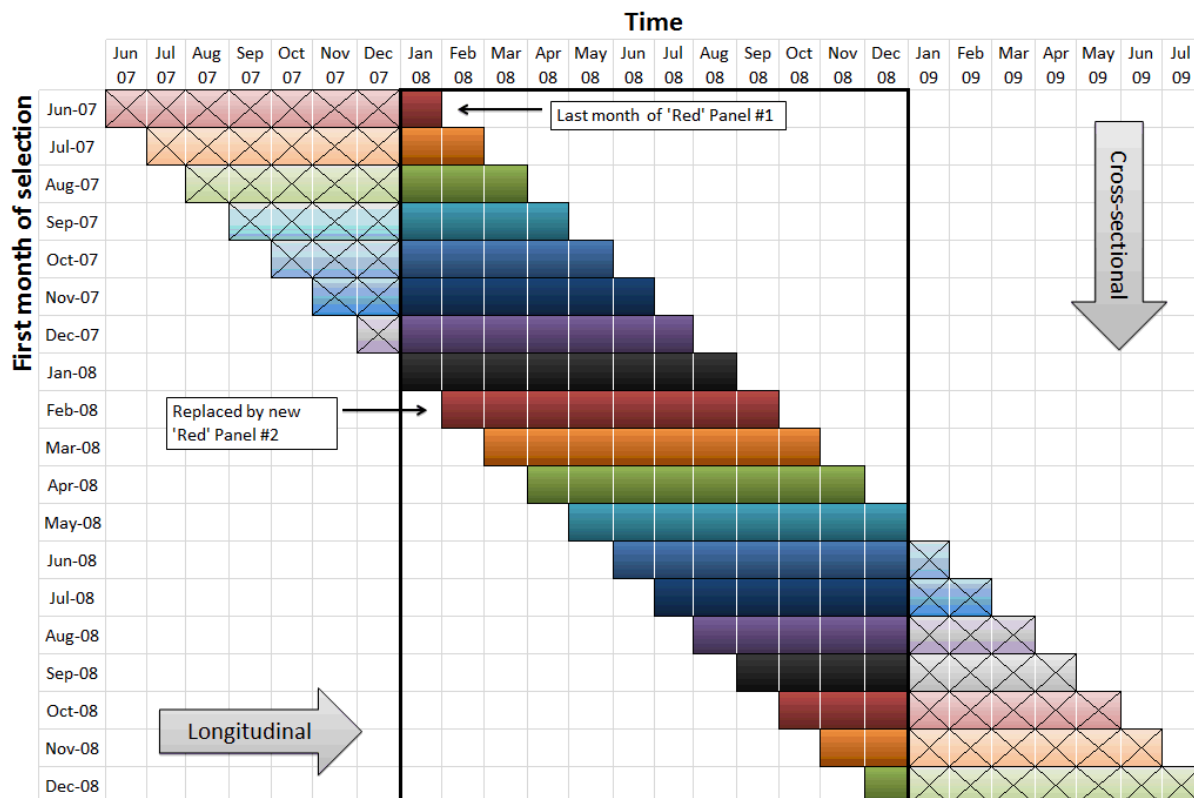

[<< Previous Section: Survey Methodology](#)

[Next Section: Using the CURF >>](#)

### LONGITUDINAL STRUCTURE

Households selected for the Labour Force Survey (LFS) are interviewed each month for eight months, with one-eighth of the sample being replaced each month. This rotating structure allows for the creation of longitudinal linkages into 8 month panels, where the responses from households across an 8 month period can be linked together. Panels that reach the end of their 8 month period are replaced with new panels who generally have similar characteristics.

The diagram below conceptually represents the longitudinal structure for a shortened illustrative period of January 2008 to December 2008. For each month, a complete cross-section of data is provided with all 8 rotation groups included (i.e. columns with squares of all 8 colours).

Starting in January, there is a 'red' panel that is answering the Labour Force Survey for the last time after starting in June 2007. The previous 7 monthly responses are not included, as they lie outside of the selected period.

In February, this group is dropped from the LFS and replaced by a new 'red' group, which answers the LFS for the period February to September 2008. In this case, the full 8 month longitudinal panel is included and linked via common and unique identifiers for each person across the months.

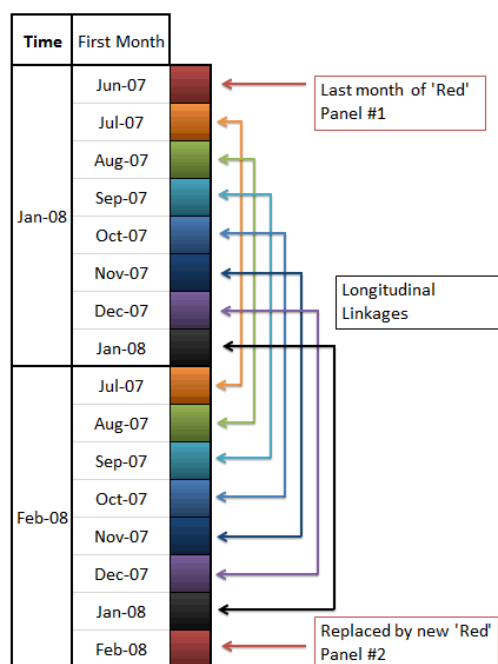

In October, this group is again replaced by a new group whose panel spans October 2008 to May 2009. In this illustrative example where the CURF was only for January 2008 to December 2008, the data from January to May 2009 would not be included as they fall outside of the selected period, however in the actual CURF they are included.

It's important to note that not all respondents will be available across the full 8 months. People who move to a new dwelling, are away from their usual dwelling for more than 6 weeks, or become out of scope (such as joining the permanent Australian defence force) do not provide responses for the whole selected 8 month period (see **Number of months captured in survey** [ABSNMTH]). Furthermore, records obtained from special dwellings (see **Residence Status** [URSTATC]) are not linked longitudinally, as they are obtained from dwellings such as hotels, hospitals and prisons, which may or may not be occupied by different people from month-to-month.

When analysing data longitudinally, people with incomplete records and those from special dwellings are not included, and these people are more likely to be not in the labour force or unemployed. People who provide responses for the full 8 month period are more likely to be stably employed, so longitudinal analysis is likely to have a significant bias towards employment, so take care when interpreting results. For more information, refer to **Population count** [POPCNTC].

It is expected that future releases of the LLFS CURF will extend both forwards into 2011 and backwards into 2007. This will mean that the partially complete panels in this release that extend beyond December 2010 and before January 2008 will be included in future releases of the LLFS CURF.

**Note:** While the above diagram conceptually illustrates the longitudinal structure, the data in the LLFS CURF is actually presented as a 'long' vertical file, as below, rather than a 'wide' horizontal file, as above. To convert the LLFS CURF into the 'wide' horizontal format, refer to Longitudinal analysis.

[Next Page](#)

## Cross-sectional structure and supplementary data

[Contents >>](#) [File Structure >>](#) [Cross-sectional structure and supplementary data](#)

### FILE STRUCTURE

[<< Previous Section: Survey Methodology](#)

[Next Section: Using the CURF >>](#)

### CROSS-SECTIONAL STRUCTURE AND SUPPLEMENTARY DATA

The Longitudinal Labour Force Survey (LLFS) CURF is designed to be used both longitudinally and cross-sectionally. Every monthly cross-section is made up of responses from each of the 8 overlapping longitudinal panels, and is exactly equivalent to all of the responses of the monthly Labour Force Survey (LFS).

Cross-sectional estimates from the LLFS CURF (using the variable **Weight for the current month [WEIGHT]**) will closely match the equivalent original estimates published in the main Labour Force, Australia publications (cat. no. 6202.0, 6291.0.55.001 and 6291.0.55.003), as published in November 2012.

Alongside the cross-sectional data, additional data items have been appended from the labour force supplementary survey program. These surveys are run concurrently with the LFS using the same sample of people. They provide additional cross-sectional data for the months they are collected, but since they are run less frequently (usually annually) on entirely different samples, they provide no further longitudinal information.

Data from the following supplementary surveys have been appended to the LLFS CURF

- Education and Work, Australia (SEW, cat. no. 6227.0)  
Every May from seven-eighths of the LFS sample aged 15 to 64 years in 2008 and 15 to 74 years in 2009 and 2010.
- Underemployed Workers, Australia (UEW, cat. no. 6265.0)  
Every September from underemployed workers in seven-eighths of the LFS sample
- Persons Not in the Labour Force, Australia (PNILF, cat. no. 6220.0),  
Every September from those who are not in the labour force in seven-eighths of the LFS sample.
- Labour Mobility, Australia (LMS, cat. no. 6209.0)  
February every 2 years from seven-eighths of the LFS sample
- Forms of Employment, Australia (FOES, cat. no. 6359.0)  
Every November from the people employed in seven-eighths of the LFS sample
- Employee Earnings, Benefits and Trade Union Membership, Australia (EEBTUM, cat. no. 6310.0)  
Every August from the employees in seven-eighths of the LFS sample
- Multipurpose Household Survey (MPHS, cat. no. 4100.0)  
Every month from one selected person per household in one-eighth of the LFS sample (the one-eighth of the LFS sample that has been in the survey for the full 8 months) across a financial year period.
- Retirement and Retirement Intentions, Australia (RRI, cat. no. 6238.0)  
Every 2 years in the MPHS

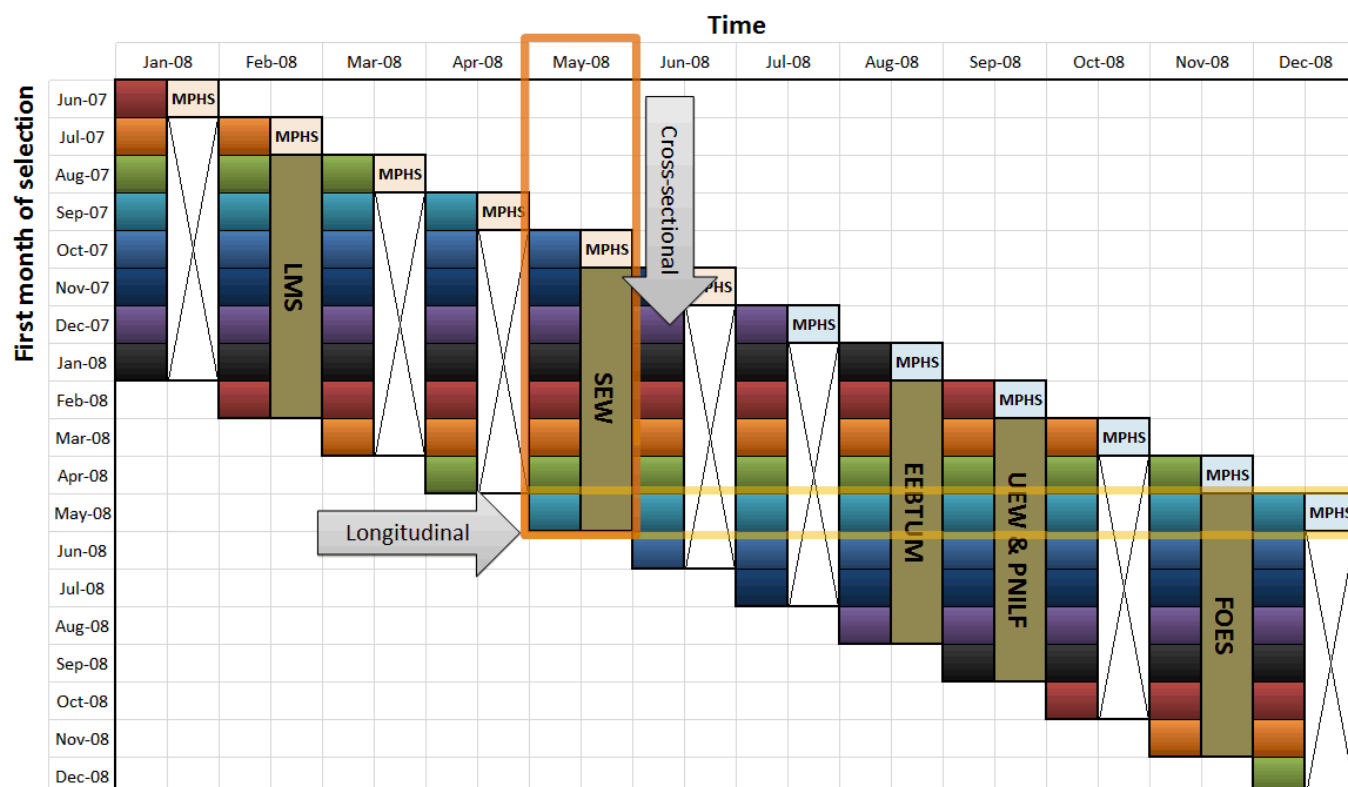

For example, the month of May 2008 highlighted below has a cross-section of Education data items from the Survey of Education and Work. This cross-section of data relates to May 2008 only, but it can be assumed that most people in panels that extend into months before and after May 2008 probably have the same education characteristics as those reported in May 2008.

Considering the highlighted panel starting in May 2008, it is possible that people (who are employees) in this group provided:

- **Level of highest non-school qualification [LVHNSQCE]** in the May SEW (for those aged 15 to 64)

- **Weekly earnings in main job** [WINCMJCE], in the August EEBTUM
- **Employment type** ('Employees with/without paid leave entitlements') [EMPTYPCE] in the November FOES; and
- **Age intends to retire** [RETAGEC] in the RRI topic of the MPHS in December (for those aged 45 years and over).

As shown below, not all panels intersect with the same supplementary surveys, so some these additional data items are not obtained for all respondents in the LFS.

While it is possible to assume that the data provided in a particular supplementary survey can be applied across all months of an intersecting longitudinal LFS panel, care should be taken to consider other related data items to see if anything has changed that could alter that assumption. For example:

- If someone reported in May that their **Level of highest non-school qualification** is 'no non-school qualification,' but they also reported that they were enrolled (see **Educational enrolment** [EDUENROC]) in University (see **Type of educational institution** [EDINSTCE]) then it is possible that they completed a new non-school qualification (i.e. 'Bachelor degree') in June the following month if they graduated mid-year. If most of the panel relates to months following June, then the response of 'no non-school qualification' in May is not representative of the respondent for that 8 month period.
- If someone provides **Weekly earnings in main job** in August, and then becomes unemployed (see **Labour force status** [LFSTATCE]) in September, and then becomes employed again in October and November, then the **Employment type** provided in November is unlikely to relate to the same job as reported in August.

## Weighting

[Contents >>](#) [File Structure >>](#) [Weighting](#)

### FILE STRUCTURE

[<< Previous Section: Survey Methodology](#)

[Next Section: Using the CURF >>](#)

### WEIGHTING

In order to calculate estimates relating to the Australian population, rather than the numbers of people in the sample, weights need to be used for each person to account for their chance of selection in the Labour Force Survey (LFS) sample. In other words, if someone has a 1 in 100 chance of selection, then their responses are taken as representative of the 99 other people who were not selected, so we multiply this person's data by 100 to account for the unsampled data. This multiplier is known as the weight.

Households selected in different states and territories have different chances of selection to account for the differing population sizes and dispersion (for more information refer to Information Paper: Labour Force Survey Sample Design, Nov 2007, cat. no. 6269.0). The people interviewed in these households also have different sex and age characteristics, and the sample may not capture an exact representation of people in Australia (too many or too few 15 year old males, for example). By applying appropriately sized weights for each respondent, estimates can be calculated so as to account for the bias in the different response rates across population groups, as well as the household's chance of selection.

The **Weight for the current month** [WEIGHT] variable in this release of the Longitudinal Labour Force Survey (LLFS) CURF are the same as the weights used to produce the estimates in the November 2012 editions of the main Labour Force, Australia publications (cat. no. 6202.0, 6291.0.55.001 and 6291.0.55.003). These weights relate to the **Person** level (weights are not provided for the Family or Household/Dwelling levels as most data items relate to the Person level). They are generated using composite estimation, and cross-sectional (point-in-time) estimates produced from the CURF will closely match the published original estimates (for more information, refer to Estimation method).

However, the weights have no relationship to the estimates published in the supplementary survey publications, as these are calculated using different

benchmarks, estimation methods, and population exclusions. Weights from the supplementary surveys are not provided in the CURF. When calculating estimates based on supplementary survey data items in this CURF, they may not match official estimates produced in the publications corresponding to those supplementary surveys.

For a respondent who is in the labour force survey for the full 8 months cycle, they will have a corresponding weight for each month. These weights are then useful for calculating cross-sectional estimates, as they correspond to each 'point in time.'

For longitudinal analysis, there are a few different ways of calculating estimates based on the weights provided. These include:

- Using a single representative weight for each person from the available weights provided. This could be the weight from the first, last, or middle month of a given span of analysis.
- Using an average of all the monthly weights provided for each person.
- Producing customised weights based on the original population counts provided (see **Population count** [POPCNTC]).

When analysing data longitudinally, people with incomplete records (see **Number of months captured in survey** [ABSNMTH]) and those from special dwellings (see **Residence Status** [URSTATC]) are not included, and these people are more likely to be not in the labour force or unemployed. People who provide responses for the full 8 month period are more likely to be stably employed, so longitudinal analysis is likely to have a significant bias towards employment, so take care when interpreting results. For more information, refer to **Population count** [POPCNTC].

[Next Page](#)

## About the CURF

[Contents >> Using the CURF >> About the CURF](#)

### USING THE CURF

[<< Previous Section: File Structure](#)

[Next Section: Data Item List >>](#)

#### ABOUT THE CURF

The data included in the LLFS 2008-10 CURF are released under the provisions of the **Census and Statistics Act 1905**. This legislation allows the Australian Statistician to release unit record data, or microdata, provided this is done "in a manner that is not likely to enable the identification of a particular person or organisation to which it relates."

The ABS ensures the confidentiality of the data by:

- removing name, address and any other information that might uniquely identify any individual
- changing a small number of values - particularly unusual values
- controlling the detail available for all records on the CURF
- excluding some data items that were collected
- controlling the modes of access to restrict access to more detailed data
- placing restrictions on how the data are used, supported by both information in the User Manual: Responsible Use of ABS CURFs (cat. no. 1406.0.55.003), the undertaking signed by the head of each organisation and the terms and conditions signed by each user.

As a result, data on the CURF may not exactly match other previously published estimates. Any changes to the distribution of values are not significant and the statistical validity of aggregate data is not affected.

## Identifiers

Contents >> Using the CURF >> Identifiers

### USING THE CURF

<< Previous Section: File Structure

Next Section: Data Item List >>

#### IDENTIFIERS

The Longitudinal Labour Force Survey (LLFS) CURF is provided as a single flat file, which is hierarchically structured into 3 levels: **Household/Dwelling**, **Family** and **Person**. Furthermore, since the LLFS spans multiple time periods, the **Survey month** also acts like an additional level in the hierarchy. There are 5 identifiers that relate to these levels:

- **Survey month ID** [ABSMID]
- **Household ID** [ABSHID]
- **Family ID** [ABSFID]
- **Person ID** [ABSPID]
- **Record ID** [ABSRID]

Every **Survey Month** has a 4 digit character, [ABSMID], which represents the year and month.

Each **Household/Dwelling** has a unique thirteen character identifier, [ABSHID]. This identifier is consistent across all months of selection in the Labour Force Survey (LFS).

On the **Family** level, each family within the household is numbered sequentially, [ABSFID], in each individual **Survey month**. This is to account for changes in family structure in households across the months of selection. The combination of month, household and family identifier uniquely identifies the family.

A **Person** identifier, [ABSPID], is assigned to each person sequentially within a household across all months of selection. On the person level, the combination of household and person identifier uniquely identifies the person. Alternatively, the **Record ID** [ABSRID], a unique 15 character identifier, can be used to uniquely identify a person across all months of the CURF. Most data items in the LLFS CURF relate to the person level.

People in special dwellings (see **Residence Status** [URSTATC]) are treated as lone individuals with no family characteristics. Each person in a special dwelling is assigned their own unique **Household ID** [ABSHID]. The ID is assigned to the person rather than the dwelling. This is because;

- Any relationships that exist between people in a special dwelling are not recorded in the LFS, so no additional information can be gained from grouping people who were interviewed in the same special dwelling.
- Special dwellings are assembled as cross-sectional ('point-in-time') measurements and are not linked longitudinally. This is because there can be no certainty in making links to records across time, as the people interviewed in hotels, prisons, boarding schools, etc. are subject to change.

[ABSHID] is sufficient to identify a person in a special dwelling, but [ABSRID] may also be used for consistency.

In summary, to specify particular levels, the following identifiers must be used:

1. **Survey Month** = [ABSMID]
2. **Household/Dwelling** = [ABSHID]
3. **Family** = [ABSMID], [ABSHID] and [ABSFID] (Note: must use all 3 as family identification is time dependent)
4. **Person** = **Either** [ABSRID] **or both** [ABSHID] **and** [ABSPID]

Since the LLFS CURF is provided as a single flat file, there is no need to copy identifiers across different datasets - everything is provided in the one file. The identifiers are provided to allow analysis across the levels, although most analysis will relate to the person level, to which most of the data items relate. The Household and Family levels are mainly provided to outline family and household relationships between the people selected in private dwellings.

### USING THE CURF

[<< Previous Section: File Structure](#)

[Next Section: Data Item List >>](#)

### LONGITUDINAL ANALYSIS

As mentioned in Longitudinal structure, the Longitudinal Labour Force Survey (LLFS) CURF is presented as a 'long' vertical file, rather than a 'wide' horizontal file.

For longitudinal analysis, the structure can be converted to the 'wide' horizontal format for a selected data item using the following SAS codes.

For multiple data items, run the code for each data item and merge the output datasets by **Record ID** [ABSRID].

#### For monthly data items

```
data saved.input (keep= ABSRID ABSHID ABSFID ABSPID ABSMID ABSFMTH M0801-M1012);
set LLFS10E.LLFS10E;

/*Replace LFSTATCE with the desired data item here*/
dataitem=LFSTATCE;

if dataitem=0 then dataitem=999999;

if ABSMID=801 then M0801=dataitem;
if ABSMID=802 then M0802=dataitem;
if ABSMID=803 then M0803=dataitem;

### USING THE CURF

[<< Previous Section: File Structure](#)

[Next Section: Data Item List >>](#)

#### CURF FILE NAMES

The 2008-10 Longitudinal Labour Force Survey (LLFS) CURF can be accessed via the Remote Access Data Laboratory (RADL) and ABS Data Laboratory (ABSDL) and is available in SAS, SPSS and STATA formats. The CURF comprises the following files:

##### Data files

[SAS](#)  
[LLFS10E.SAS7BDAT](#)

[SPSS](#)  
[LLFS10E.SAV](#)

[STATA FILES](#)  
[LLFS10E.DTA](#)

To apply for access to the LLFS CURF, refer to [How to apply for access](#)

[Previous Page](#)

[Next Page](#)

## Information Files

[Contents](#) >> [Using the CURF](#) >> [Information Files](#)

### USING THE CURF

[<< Previous Section: File Structure](#)

[Next Section: Data Item List >>](#)

#### INFORMATION FILES

##### Data item list

The Data Item List contains all the data items, including details of categories and code values, that are available on the CURF. This is available in both [plain text](#)  and [Excel spreadsheet](#)  formats, available from the Downloads tab.

The [Excel spreadsheet](#) is formatted with [links](#) to the more detailed information provided in the on-line Data Item List. These [links](#) are represented by ABS website icons .

##### Questionnaire

A sample copy of the [Labour Force Survey Questionnaire](#) is provided as an [Adobe pdf](#) , available from the Downloads tab.

##### Formats file

[FORMATS.sas7bcats](#) - This file is a [SAS library](#) containing formats.

##### Frequency files

###### Household

###### [LLFS10E\\_Jan08H.txt](#) - [LLFS08\\_Dec10H.txt](#)

Files containing documentation of the Household level data for each month. Data item code values and category labels are provided with the unweighted household frequencies of each value. This file is in plain text format.

###### [LLFS10E\\_ALLHCS.txt](#)

A file containing documentation of the Household level data for all cross-sectional records in the CURF. Data item code values and category labels are provided with the unweighted household frequencies of each value. This file is in plain text format.

###### [LLFS10E\\_ALLHL.txt](#)

## INTRODUCTION

This section details the user responsibilities, conditions of sale, pricing, and how to apply for access.

This section contains the following subsection :

- User responsibilities
- Conditions of sale
- Price
- How to apply for access
- Further information

[Previous Page](#)

[Next Page](#)

## User responsibilities

[Contents >> Conditions of Use >> User responsibilities](#)

### CONDITIONS OF USE

[<< Previous Section: Data Item List](#)

[Next Section: Definitions and Quality >>](#)

## USER RESPONSIBILITIES

The **Census and Statistics Act** includes a legislative guarantee to respondents that their confidentiality will be protected. This is fundamental to the trust the Australian public has in the ABS, and that trust is in turn fundamental to the excellent quality of ABS information. Without that trust, survey respondents may be less forthcoming or truthful in answering our questionnaires. For more information, see 'Avoiding inadvertent disclosure' and 'Microdata' on our web page [How the ABS keeps your information confidential](#).

### CURF data

The release of CURF data is authorised by clause 7 of the Statistics Determination made under subsection 13(1) of the **Census and Statistics Act 1905**. The release of a CURF must satisfy the ABS legislative obligation to release information in a manner that is not likely to enable the identification of a particular person or organisation.

This legislation allows the Australian Statistician to approve release of unit record data. All CURFs released have been approved by the Statistician. Prior to being granted access to CURFs, each organisation's Responsible Officer must submit a CURF Undertaking to the ABS. The CURF Undertaking is required by legislation and states that, prior to CURFs being released to an organisation, a Responsible Officer must undertake to ensure that the organisation will abide by the conditions of use of CURFs. Individual users are bound by the undertaking signed by the Responsible Officer.

All CURF users are required to read and abide by the conditions and restrictions in the User Manual: Responsible Use of ABS CURFs (cat. no.

1406.0.55.003). Any breach of the CURF Undertaking may result in withdrawal of service to individuals and/or organisations. Further information is contained in the Consequences of Failing to Comply web page.

### CONDITIONS OF USE

[<< Previous Section: Data Item List](#)

[Next Section: Definitions and Quality >>](#)

#### PRICE

Microdata access is priced according to ABS Pricing Policy and Commonwealth Cost Recovery Guidelines.

For details refer to ABS Pricing Policy on the ABS website.

For microdata prices refer to the Microdata prices web page.

[Previous Page](#)

[Next Page](#)

## How to apply for access

[Contents >> Conditions of Use >> How to apply for access](#)

### CONDITIONS OF USE

[<< Previous Section: Data Item List](#)

[Next Section: Definitions and Quality >>](#)

#### HOW TO APPLY FOR ACCESS

Clients wishing to access the microdata should read the How to Apply for Microdata web page.

Clients should familiarise themselves with the User Manual: Responsible Use of ABS CURFs (cat. no. 1406.0.55.003) and other related microdata information which are available via the Microdata web pages, before applying for access through MiCRO.

#### Australian Universities

The ABS/Universities Australia Agreement provides participating universities with access to a range of ABS products and services. This includes access to microdata.

For further information, university clients should refer to the ABS/Universities Australia Agreement web page.

## SUGGESTIONS AND FEEDBACK

The ABS welcomes feedback and suggestions about the format and contents of the Longitudinal Labour Force Survey CURF and its associated documentation and technical manual (this publication).

- For suggestions and feedback regarding the file structure, data items, categories, and formatting of the microdata, please contact us by email at [labourforce@abs.gov.au](mailto:labourforce@abs.gov.au) with the subject header "LLFS CURF Microdata:"
- For suggestions and feedback regarding the content and formatting of the LLFS CURF Technical Manual (this publication), including accessibility issues via tablet devices, please contact us by email at [labourforce@abs.gov.au](mailto:labourforce@abs.gov.au) with the subject header "LLFS CURF Manual:"
- For general enquiries regarding labour force statistics, including the LLFS CURF, please contact us by email at [labourforce@abs.gov.au](mailto:labourforce@abs.gov.au) or phone the labour force hotline on (02) 6252 6525 during business hours (AEST).
- For suggestions and feedback regarding access to microdata via the Remote Access Data Laboratory (RADL) and the ABS Data Laboratory (ABSDL), please contact us by email at [microdata.access@abs.gov.au](mailto:microdata.access@abs.gov.au) or phone (02) 6252 7714.

## Record Identifiers

[Contents >> Record Identifiers](#)

### RECORD IDENTIFIERS

[<< Previous Section: Index](#)

[Next Section: Month Identifiers >>](#)

---

## INTRODUCTION

The record identifiers are used to identify the records in the CURF that belong to the same individual, family, or household.

An ID is assigned to each individual in the survey, so that their responses in different months can be compared and contrasted longitudinally across time.

Similarly, Family and Household IDs are also assigned to the records, so that respondents who belong to the same family or household can be grouped and analysed as a unit.

These record identifiers form the basis of the CURFs hierarchical structure, which is explored in more detail in File Structure and Identifiers.

This section contains the following subsection :

- Record ID [ABSRID]
- Household ID [ABSHID]
- Family ID [ABSFID]
- Person ID [ABSPID]

[Previous Page](#)

[Next Page](#)

## Record ID [ABSRID]

[Contents >> Record Identifiers >> Record ID \[ABSRID\]](#)

### RECORD IDENTIFIERS

[<< Previous Section: Index](#)

[Next Section: Month Identifiers >>](#)

---

## RECORD ID

This identifier is an unique ID for each individual person in the CURF.

An individual can have up to 8 records in the CURF, since respondents are selected in the Labour Force Survey (LFS) for 8 consecutive months (see **Number of months captured in survey** [ABSNMTH]).

The Record ID has 15 characters and is an amalgam of 3 other key identifiers. It has the following format:

**LLFSYYMMHHHHPP**

- **LLFS**  
A prefix of letters (**L**ongitudinal **L**abour **F**orce **S**urvey).
- **YYMM**  
Year (2 digits) and Month (2 digits) for when the household was first selected in the LFS.  
Example. 0801 = January 2008.  
See **First month of selection in survey** [ABSFMTM]
- **HHHHH**  
A 5 digit number to uniquely identify a household within the group that was first selected in the month identified.  
Households are assigned a number between 00001 and 06275, depending on the number of households in the group.  
See **Household ID** [ABSHID].
- **PP**  
A 2 digit number to uniquely identify a person in the household.  
Persons are assigned a number between 1 and 23, depending on the number people in the household.  
See **Person ID** [ABSPID].

These record identifiers form the basis of the CURFs hierarchical structure, which is explored in more detail in File Structure and Identifiers.

## Household ID [ABSHID]

[Contents >>](#) [Record Identifiers >>](#) [Household ID \[ABSHID\]](#)

### RECORD IDENTIFIERS

[<< Previous Section: Index](#)

[Next Section: Month Identifiers >>](#)

#### HOUSEHOLD ID

This identifier is an unique ID for each household/dwelling in the CURF.

A household in a private dwelling can have up to 8 records in the CURF, since private dwellings are selected in the Labour Force Survey (LFS) for 8 consecutive months (see **Number of months captured in survey** [ABSNMTH]). Every person in that household has the same Household ID.

Special dwellings (prisons, hotels, boarding schools, Indigenous communities etc. see **Residence Status** [URSTATC]) are also assigned household identifiers, except each person in a special dwelling is assigned their own unique Household ID. The ID is assigned to the person rather than the dwelling. This is because;

- Any relationships that exist between people in a special dwelling are not recorded in the LFS, so no additional information can be gained from grouping people who were interviewed in the same special dwelling.
- Special dwellings are assembled as cross-sectional ('point-in-time') measurements and are not linked longitudinally. This is because there can be no certainty in making links to records across time, as the people interviewed in hotels, prisons, boarding schools, etc. are subject to change.

The Household ID has 13 characters and is an amalgam of 2 other key identifiers. It has the following format:

**LLFSYYMMHHHHH**

- **LLFS**  
A prefix of letters (**L**ongitudinal **L**abour **F**orce **S**urvey).
- **YYMM**  
Year (2 digits) and Month (2 digits) for when the household was first selected in the LFS.  
Example. 0801 = January 2008.  
See **First month of selection in survey** [ABSFMTM]

■ HHHHH

A 5 digit number to uniquely identify a household within the group that was first selected in the month identified. Households are assigned a number between 00001 and 06275, depending on the number of households in the group. See **Household ID** [ABSHID].

These record identifiers form the basis of the CURFs hierarchical structure, which is explored in more detail in File Structure and Identifiers.

## Family ID [ABSFID]

[Contents >>](#) [Record Identifiers >>](#) [Family ID \[ABSFID\]](#)

### RECORD IDENTIFIERS

[<< Previous Section: Index](#)

[Next Section: Month Identifiers >>](#)

### FAMILY ID

This identifier is an unique ID number for each family in a **Household/Dwelling**.

Family IDs only relate to families within a household (see **Household ID** [ABSHID]). Families are **only** assigned an ID number in cases where households have **more than one family**.

Single family households are assigned a value that indicates the household has only one family.

People in households who are not members of the family or families in the household are assigned a value to remove them from family identification. Group households and Lone person households are also assigned this number.

Special dwellings are also removed from family identification (see **Residence Status** [URSTATC]).

Family IDs are time dependent and are assigned on a monthly basis. This is to account for changes in household and family structure across the months of selection. The combination of month (see **Survey month ID** [ABSMID]), household (see **Household ID** [ABSHID]) and family identifiers are required to uniquely identify families in the CURF. For more information, refer to File Structure and Identifiers.

For more information on families and how ABS defines household and family characteristics, refer to the publication Family, Household and Income Unit Variables, 2005 (cat. no. 1286.0).

## Person ID [ABSPID]

[Contents >>](#) [Record Identifiers >>](#) [Person ID \[ABSPID\]](#)

### RECORD IDENTIFIERS

[<< Previous Section: Index](#)

[Next Section: Month Identifiers >>](#)

### PERSON ID

This identifier is an unique ID number for each person in a **Household/Dwelling**.

Person IDs only relate to the people within the selected household (see **Household ID [ABSHID]**). For an identifier that uniquely identifies a person throughout the CURF, refer to **Record ID [ABSRID]**.

Person IDs are assigned at the **Household/Dwelling** level. This is to ensure that someone within a dwelling can be more easily tracked across all months in the survey, regardless of how the household and family composition changes over time.

For example, a 21 year old dependent student who gets married remains 'Person 3' of 'Household X' across all months in the survey, rather than 'Person 3' of 'Family 1' before the marriage and 'Person 1' of 'Family 2' after the marriage.

Each person in a special dwelling is assigned their own unique Household ID, so they do not need a Person ID and are assigned a special value (see **Residence Status [URSTATC]**).

These record identifiers form the basis of the CURFs hierarchical structure, which is explored in more detail in [File Structure and Identifiers](#).

## Month Identifiers

[Contents >>](#) [Month Identifiers](#)

### MONTH IDENTIFIERS

[<< Previous Section: Record Identifiers](#)

[Next Section: Geography >>](#)

### INTRODUCTION

The month identifiers are used to identify the month that relates to the associated records.

The LLFS CURF can be analysed as both a cross-sectional ('point-in-time') dataset, as well as a longitudinal dataset. The month identifiers allow for both kinds of analysis.

This section contains the following subsection :

- Survey month ID [ABSMID]
- First month of selection in survey [ABSFMTMTH]
- Number of months captured in survey [ABSNMTH]

[Previous Page](#)

[Next Page](#)

## Survey month ID [ABSMID]

[Contents](#) >> [Month Identifiers](#) >> [Survey month ID \[ABSMID\]](#)

### MONTH IDENTIFIERS

[<< Previous Section: Record Identifiers](#)

[Next Section: Geography >>](#)

#### SURVEY MONTH ID

This identifier is an unique ID number for each month of the period January 2008 to December 2010. It relates to the labour force survey conducted in that month.

Each person from a private dwelling can have up to eight records (rows) worth of data. The Survey month ID identifies the month related to each particular record of data.

People in special dwellings (see **Residence Status** [URSTATC]) only have one record of data, and the Survey month ID refers to the month that this data was collected (see **Household ID** [ABSHID]).

The Survey month ID is either 3 or 4 digits in length. The last 2 digits relate to the calendar month, where '01' is January, '02' is February and so on up to '12' for December. The leading digit or digits relate to the year, where 8 is 2008, 9 is 2009 and 10 is 2010.

These identifiers form the basis of the CURFs structure, which is explored in more detail in [File Structure and Identifiers](#).

## First month of selection in survey [ABSFMTMTH]

[Contents](#) >> [Month Identifiers](#) >> [First month of selection in survey \[ABSFMTMTH\]](#)

### MONTH IDENTIFIERS

[<< Previous Section: Record Identifiers](#)

[Next Section: Geography >>](#)

#### FIRST MONTH OF SELECTION IN SURVEY

This identifier is an unique ID number for the first month that someone was selected to participate in the Labour Force Survey (LFS).

It has the same format as **Survey month ID** [ABSMID], where the last 2 digits relate to the calendar month and the leading digit or digits relate to the year.

Each person from a private dwelling has only one First month of selection in survey and it is the same for all records of data.

The First month of selection in survey may not necessarily be the same month as the first record of data, as the respondent may not have been available in the first month of selection, or the dwelling may have been vacant. This is revealed when comparing this identifier to **Survey month ID**.

Refer to Longitudinal structure for more information.

People in special dwellings (see **Residence Status** [URSTATC]) only have one record of data, and the First month of selection in survey is the same as the Survey month ID (i.e. the month that the data was collected). This is regardless of whether the actual dwelling itself was selected in prior months, as data collected from special dwellings are assembled as cross-sectional ('point-in-time') measurements at the **Person** level rather than the **Household/Dwelling** level (see **Household ID** [ABSHID]).

### MONTH IDENTIFIERS

[<< Previous Section: Record Identifiers](#)

[Next Section: Geography >>](#)

#### NUMBER OF MONTHS CAPTURED IN SURVEY

This data item is simply the number of months someone was interviewed in the Labour Force Survey (LFS). It relates to the number of records for that person in the CURF.

Each private dwelling is selected for 8 months in the survey, but the people within the dwelling can have less than 8 records depending on how many times they were captured in the LFS. This data item provides a quick reference to the number of records per person, providing an indication of how complete the longitudinal data is for each person.

Refer to Longitudinal structure for more information.

People in special dwellings (see **Residence Status** [URSTATC]) only have one record of data (see **Household ID** [ABSHID]) and so this data item is always '1', for people in special dwellings.

## Geography

Contents >> Geography

### GEOGRAPHY

<< Previous Section: Month Identifiers

Next Section: Survey >>

#### INTRODUCTION

The geographic data items identify where someone is, or usually lives, in Australia.

The LLFS CURF is limited to state and territory level geography only.

This section contains the following subsection :

State or territory of selection and interview [STATSLCE]

State or territory of usual residence [STATURCE]

Previous Page

Next Page

## State or territory of selection and interview [STATSLCE]

Contents >> Geography >> State or territory of selection and interview [STATSLCE]

### GEOGRAPHY

<< Previous Section: Month Identifiers

Next Section: Survey >>

#### STATE OR TERRITORY OF SELECTION AND INTERVIEW

This data item is the state or territory that a dwelling was selected and the location where the interview for the labour force survey was conducted.

The State or territory of selection and interview remains constant in the longitudinal data as it relates to the selection of the **Dwelling** in the labour force sample. If a person in that selected dwelling moves to another state, the labour force survey does not follow them for the remaining months of selection, since there is a small chance that the person might move into another dwelling selected in the labour force survey and therefore be counted twice.

Visitors to selected dwellings may have a **State or territory of usual residence** [STATURCE] that is different to that State or territory of selection and interview. These people have their **Weight for the current month** [WEIGHT] adjusted to account for the differing chance of selection between the states and territories (see Information Paper: Labour Force Survey Sample Design, Nov 2007, cat. no. 6269.0).

Jervis Bay Territory, the Australian Antarctic Territory and the Territories of Christmas Island and Cocos (Keeling) Islands are excluded from the Labour Force Survey.

**Identifier:** STATSLCE

**Level:** Household/Dwelling

**Source:** LFS

**Frequency:** Not applicable

**Population:** All

## State or territory of usual residence [STATURCE]

[Contents >> Geography >> State or territory of usual residence \[STATURCE\]](#)

### GEOGRAPHY

[<< Previous Section: Month Identifiers](#)

[Next Section: Survey >>](#)

#### STATE OR TERRITORY OF USUAL RESIDENCE

This data item is the state or territory where someone usually lives.

Standard labour force estimates are output to State or territory of usual residence.

Most of the time, the private dwelling selected in the labour force survey is where someone usually lives, so **State or territory of selection and interview** [STATSLCE] is typically the same as State or territory of usual residence.

Visitors to selected dwellings may have a State or territory of usual residence that is different to that State or territory of selection and interview. These people have their **Weight for the current month** [WEIGHT] adjusted to account for the differing chance of selection between the states and territories (see Information Paper: Labour Force Survey Sample Design, Nov 2007, cat. no. 6269.0).

Jervis Bay Territory, the Australian Antarctic Territory and the Territories of Christmas Island and Cocos (Keeling) Islands are excluded from the Labour Force Survey.

#### INTRODUCTION

The survey data items relate to the manner in which the data was collected, and the reconciliation between the dwelling of selection and the dwelling of usual residence.

This section contains the following subsection :

Respondent detail [RESPTYPC]  
Residence status [URSTATC]

[Previous Page](#)

[Next Page](#)

## Respondent detail [RESPTYPC]

[Contents >> Survey >> Respondent detail \[RESPTYPC\]](#)

## SURVEY

[<< Previous Section: Geography](#)

[Next Section: Demography >>](#)

### RESPONDENT DETAIL

This data item indicates whether the data was collected directly from the person themselves, or from another responsible adult in the household.

The labour force survey is asked from Any Responsible Adult (ARA) in the household on behalf of all members in the household aged over 15.

Occasionally, there can be inconsistent or incorrect information provided for someone via an ARA proxy, and this data item is provided to help inform these inconsistencies.

Respondent detail only applies to people interviewed in private dwellings. People in special dwellings are recorded as 'Unknown'

For more information, refer to Data collection.

This data item does not relate to the information obtained from the Multipurpose Household Survey (MPHS, cat. no. 4100.0), as this is always collected via a personal interview (i.e. 'Obtained from person him/herself').

### RESIDENCE STATUS

This data item indicates whether someone is a usual resident or a visitor to a private dwelling. It also indicates whether someone is in a special dwelling.

Special dwellings are places like hotels, prisons, hospitals, boarding schools etc. These are selected to complement the private dwelling selections in order to get a complete view of the Australian population.

Dwellings in indigenous communities are also grouped with special dwellings.

For more information, refer to Sample design.

## AGE

This data item provides the age of the person.

Single year ages are recorded up until people aged 85 years and over.

Age is consistent across the longitudinal records. People who have a birthday during their 8 months in the labour force survey have had their age recorded as the most reported age. If a person has a birthday early during the 8 month period, their oldest age is recorded, and if a person has a birthday late, their youngest age is recorded.

For broader age groups, refer to **Age group** [AGECB]

## Social marital status [SOCMARCE]

[Contents >> Demography >> Social marital status \[SOCMARCE\]](#)

### DEMOGRAPHY

[<< Previous Section: Survey](#)

[Next Section: Household and Family >>](#)

#### SOCIAL MARITAL STATUS

This data item indicates whether someone is in a couple relationship with another usual resident or not. This can be a formal registered marriage, a de facto partnership, or a same-sex relationship.

Social marital status is measured every month, and is therefore subject to changes across the longitudinal records.

Social marital status only applies to people who are in a couple relationship and who both usually live in the same dwelling. People who are interviewed as visitors to private dwellings or in special dwellings can be recorded as married even if their partner is not with them, as long as they have another residence where they both usually live.

There are occasions where a person may report that they are married, but their partner may not be present in the household. This could be because their partner was away from the household for more than 6 weeks, or it could be that their partner is out of scope from the labour force survey, such as a member of the permanent Australian defence force.

Social marital status is a significant component in the derivation of Household and Family characteristics, distinguishing between couple and lone parent families.

## Household and Family

[Contents >> Household and Family](#)

### HOUSEHOLD AND FAMILY

[<< Previous Section: Demography](#)

[Next Section: Education >>](#)

#### INTRODUCTION

The household and family data items detail the household and family characteristics of people in the Labour Force Survey. They can inform social based analysis, and the interdependencies of family relationships can help to provide insight into labour force characteristics.

Household and family characteristics are not collected in special dwellings (see **Residence Status** [URSTATC]).

In private dwellings, household and family characteristics are provided at all three levels; **Household/Dwelling**, **Family**, and **Person**. For more information on the levels in the CURFs hierarchical structure, see Level Structure and Identifiers.

For more information on families and how ABS defines household and family characteristics, refer to the publication Family, Household and Income Unit Variables, 2005 (cat. no. 1286.0).

This section contains the following subsection :

- Household/Dwelling level characteristics
- Family level characteristics
- Person level characteristics

[Previous Page](#)

[Next Page](#)

## Household/Dwelling level characteristics

[Contents >> Household and Family >> Household/Dwelling level characteristics](#)

### HOUSEHOLD AND FAMILY

[<< Previous Section: Demography](#)

[Next Section: Family level characteristics >>](#)

#### HOUSEHOLD/DWELLING LEVEL CHARACTERISTICS

These family data items apply to the **Household/Dwelling** level.

They describe the household as a single unit, so all members in the household will have the same household characteristics for a given month.

To identify individual households, refer to **Household ID** [ABSHID]

This section contains the following subsection :

- Family composition of household [FAMCHHCE]
- Number of people in household (including visitors) [HNUMWVC]
- Number of usual residents in household (excludes visitors) [HNUMURC]

[Previous Page](#)

[Next Page](#)

### HOUSEHOLD AND FAMILY

[<< Previous Section: Demography](#)

[Next Section: Family level characteristics >>](#)

#### FAMILY COMPOSITION OF HOUSEHOLD

This data item describes the family characteristics of the household. These include couple family, one parent family, and multiple family households.

The household is described as a single unit, so all members in the household will have the same household characteristics for a given month. To identify individual households, refer to **Household ID** [ABSHID]

'Other one family households' includes families where no couple relationship or parent-child relationships exist (such as siblings living together). It also includes one parent families with no dependent children (i.e. non-dependent children only) and couple families with no dependent children but with other family members.

Family characteristics are not collected in special dwellings (see **Residence Status** [URSTATC]).

For more information on families and how ABS defines family and household characteristics, refer to the publication Family, Household and Income Unit Variables, 2005 (cat. no. 1286.0).

## Number of people in household (including visitors) [HHNUMWVC]

[Contents >>](#) [Household and Family >>](#) [Household/Dwelling level characteristics >>](#) [Number of people in household \(including visitors\) \[HHNUMWVC\]](#)

### HOUSEHOLD AND FAMILY

[<< Previous Section: Demography](#)

[Next Section: Family level characteristics >>](#)

#### NUMBER OF PEOPLE IN HOUSEHOLD (INCLUDING VISITORS)

This data item describes the number of people in a household, including visitors and children under 15 years.

In the flat file structure, all members of the household will have the same number assigned to their records for any given month (see File Structure for more information). To identify individual households, refer to **Household ID** [ABSHID]

The Number of people in household is based on the number of people aged over 15 years (who are in the labour force survey and appear as records in the CURF) and the number of children under 15 years (who are not in the survey but appear as a data item for parents).

The data item is limited to '2 or more children' (see **Number of children aged 0 to 14 years** [FAMNKIDC]).

For this data item, the number of people in a household relates to the smallest possible number of people, and can be thought of as "at least this many people".

Examples:

- a group house with 3 unrelated individuals is a household of exactly 3 people (as there are no children)
- a couple family with 1 child is a household with exactly 3 people (as the exact number of children is known).

However;

- a lone parent with '2 or more children' is a household with 3 **or more** people (the exact number of children is not known).

All of these households are reported as having '3 or more people,' even though the first two examples are known to be exactly 3.

People in special dwellings (see **Residence Status** [URSTATC]) are treated as single person 'households' (See **Household ID** [ABSHID]), so are excluded

from this data item.

### HOUSEHOLD AND FAMILY

[<< Previous Section: Demography](#)

[Next Section: Family level characteristics >>](#)

#### NUMBER OF USUAL RESIDENTS IN HOUSEHOLD (EXCLUDES VISITORS)

This data item describes the number of usual residents in a household, including children under 15 years. Visitors to private dwellings are excluded.

In the flat file structure, all members of the household will have the same number assigned to their records for any given month (see [File Structure](#) for more information). To identify individual households, refer to **Household ID** [ABSHID]

Households that have couples where only one partner has been recorded in the labour force survey have an additional usual resident added to the Number of usual residents in household to represent this absent partner (See **Social marital status** [SOCMARCE] for more information).

The Number of usual residents in household is based on the number of people aged over 15 years (who are in the labour force survey and appear as records in the CURF) and the number of children under 15 years (who aren't in the survey but appear as a data item for parents).

The data item is limited to '2 or more children' (see **Number of children aged 0 to 14 years** [FAMNKIDC]).

For this data item, the number of people in a household relates to the smallest possible number of people, and can be thought of as "at least this many people".

Examples:

- a group house with 3 unrelated individuals is a household of exactly 3 people (as there are no children)
- a couple family with 1 child is a household with exactly 3 people (as the exact number of children is known).

However;

- a lone parent with '2 or more children' is a household with 3 **or more** people (the exact number of children is not known).

All of these households are reported as having '3 or more people,' even though the first two examples are known to be exactly 3.

People in special dwellings (see **Residence Status** [URSTATC]) are treated as single person 'households' (See **Household ID** [ABSHID]), so are excluded from this data item.

### HOUSEHOLD AND FAMILY

[<< Previous Section: Household/Dwelling level characteristics](#)

[Next Section: Person level characteristics >>](#)

#### FAMILY COMPOSITION

This data item describes the composition of families. These include couple families and one parent families.

The family is described as a single unit, so all members in the family will have the same family characteristics for a given month. Families within multiple-family households are separately identified by the identifier **Family ID** [ABSFID]

'Other family' includes families where no couple relationship or parent-child relationships exist, such as siblings living together.

Non-family members have a series of supplementary codes to define their relationship to the family, families or other members in the household.

Family characteristics are not collected in special dwellings (see **Residence Status** [URSTATC]).

For more information on families and how ABS defines family characteristics, refer to the publication Family, Household and Income Unit Variables, 2005 (cat. no. 1286.0).

### HOUSEHOLD AND FAMILY

[<< Previous Section: Household/Dwelling level characteristics](#)

[Next Section: Person level characteristics >>](#)

#### NUMBER OF FAMILY MEMBERS IN FAMILY

This data item describes the number of people in a family, including children under 15 years.

In the flat file structure, all members of the family will have the same number assigned to their records for any given month (see File Structure for more information). To identify individual families, refer to **Family ID** [ABSFID]

The Number of family members in family is based on the number of people aged over 15 years (who are in the labour force survey and appear as records in the CURF) and the number of children under 15 years (who aren't in the survey but appear as a data item for parents).

The data item is limited to '2 or more children' (see **Number of children aged 0 to 14 years** [FAMNKIDC]).

For this data item, the number of people in a family relates to the smallest possible number of people, and can be thought of as "at least this many people".

Examples:

- a couple family with a dependant aged over 15 years is a family with exactly 3 people (no children under 15 years).
- a couple family with 1 child is a family with exactly 3 people (as the exact number of children is known).

However;

- a lone parent with '2 or more children' is a family with 3 **or more** people (the exact number of children is not known).

All of these families are reported as having '3 or more people,' even though the first two examples are known to be exactly 3.

Families that have couples where only one partner has been recorded in the labour force survey have an additional member added to the Number of family members in family to represent this absent partner (See **Social marital status** [SOCMARCE] for more information).

Non-family members are excluded from this data item as they are not members of a family and are identified by a series of supplementary codes to define their relationship to the family, families or other members in the household.

People in special dwellings (see **Residence Status** [URSTATC]) are treated as single person 'households' (See **Household ID** [ABSHID]), so are excluded from this data item.

For more information on families and how ABS defines family characteristics, refer to the publication Family, Household and Income Unit Variables, 2005 (cat. no. 1286.0).

### HOUSEHOLD AND FAMILY

[<< Previous Section: Family level characteristics](#)

[Next Section: Education >>](#)

#### PERSON LEVEL CHARACTERISTICS

These family data items apply to the **Person** level.

To identify individuals within a selected household, refer to **Person ID** [ABSPID]. This ID is consistent across all months of selection, regardless of changes to **Family composition of household** [FAMCHHCE] and **Family composition** [FAMCOMCE].

To identify individuals within the CURF, refer to **Record ID** [ABSRID]. This ID is unique for each person in the CURF.

This section contains the following subsection :

- Relationship in household [RELHHCE]
- Number of children aged 0 to 4 years [FAMNINFC]
- Number of children aged 0 to 14 years [FAMNKIDC]
- Number of dependent students aged 15 to 24 years [FAMNDPSC]
- Number of dependants aged 0 to 24 years [FAMNDEPC]
- Number of non-dependent children aged 15 years and over [FAMNNDPC]
- Age of youngest child [AGEYNGC]

#### RELATIONSHIP IN HOUSEHOLD

This data item describes someone's relationship to the other members of their household.

Relationships are based on couple relationships or parent-child relationships within someone's family. For more information on families and how ABS defines household and family characteristics, refer to the publication Family, Household and Income Unit Variables, 2005 (cat. no. 1286.0).

Family characteristics are not collected in special dwellings (see **Residence Status** [URSTATC]).

#### NUMBER OF CHILDREN AGED 0 TO 4 YEARS

This data item is only attached to parents/guardians in a family and indicates how many children aged 0 to 4 years old they have. It only applies to children who usually live in the same dwelling.

In a lone parent family, the number of children are assigned to the lone parent or guardian record.

In a couple family, both parents/guardians have the number of children assigned to their records. For example, if both parents records indicate 1 child, they have 1 child together, not 1 child each (i.e. not 2 children in the family).

The number of children reported is limited to '2 or more children aged 0 - 4.'

Other members in the family will be recorded as 'Not a parent / Not applicable.' Unrelated members in the household will also be recorded as 'Not a parent / Not applicable'

For more information on families and how ABS defines household and family characteristics, refer to the publication Family, Household and Income Unit Variables, 2005 (cat. no. 1286.0).

Family characteristics are not collected in special dwellings (see **Residence Status** [URSTATC]).

### HOUSEHOLD AND FAMILY

[<< Previous Section: Family level characteristics](#)

[Next Section: Education >>](#)

## NUMBER OF DEPENDANTS AGED 0 TO 24 YEARS

This data item is only attached to parents/guardians in a family and indicates how many dependants aged 0 to 24 years old they have. It only applies to dependants who usually live in the same dwelling.

Dependants include both children under 15 years (see **Number of children aged 0 to 14 years** [FAMNKIDC]) and dependent students aged 15 to 24 years (see **Number of dependent students aged 15 to 24 years** [FAMNDPSC]). Unlike children under 15 years, dependent students are part of the labour force survey and have their own records in the CURF.

In a lone parent family, the number of dependants are assigned to the lone parent or guardian record.

In a couple family, both parents/guardians have the number of dependants assigned to their records. For example, if both parents records indicate 1 dependant, they have 1 dependant together, not 1 for each parent (i.e. not 2 dependants in the family).

Other members in the family, including the dependent students aged 15 to 24 years, will be recorded as 'Not a parent / Not applicable.' Unrelated members in the household will also be recorded as 'Not a parent / Not applicable'

The data item is limited to '2 or more children aged 0 - 14' (see **Number of children aged between 0 and 14 years**).

For this data item, the number of dependants relates to the smallest possible number, and can be thought of as "at least this many dependants".

Examples:

- a family with 3 dependent students aged over 15 is a family with exactly 3 dependants (no children under 15).
- a family with 1 child under 15 and 2 dependent students is also a family with exactly 3 dependants (as the exact number of children is known).

However;

- a family with '2 or more children' under 15 and 1 dependent student has 3 **or more** dependants (the exact number of children is not known).

All of these families are reported as having '3 or more dependants'

For more information on families and how ABS defines household and family characteristics, refer to the publication Family, Household and Income Unit Variables, 2005 (cat. no. 1286.0).

Family characteristics are not collected in special dwellings (see **Residence Status** [URSTATC]).

### INTRODUCTION

The education data items cover the present enrolment status of students over 15 years, as well as what qualifications people have attained and their field of study.

Most of the detailed educational data was not collected in the monthly Labour Force Survey (LFS), but was collected in the following supplementary surveys and appended to the longitudinal data.

- Education and Work, Australia (SEW, cat. no. 6227.0)  
Every May from seven-eighths of the LFS sample aged 15 to 64 years in 2008 and 15 to 74 years in 2009 and 2010.
- Underemployed Workers, Australia (UEW, cat. no. 6265.0)  
Every September from underemployed workers in seven-eighths of the LFS sample
- Labour Mobility, Australia (LMS, cat. no. 6209.0)  
February every 2 years from seven-eighths of the LFS sample
- Multipurpose Household Survey, Australia (MPHS, cat. no. 4100.0)  
Every month from a selected person per household in one-eighth of the LFS sample  
Note: Information obtained in the MPHS is always collected via a personal interview, and so does not relate to the data item **Respondent detail** [RESPTYPE], which only relates to the data items collected in the LFS and other supplementary surveys.

This section contains the following subsection :  
Educational attendance (full-time) [EDUSTATC]  
Educational enrolment [EDUENROC]  
Type of educational institution [EDINSTCE]  
Highest year of school completed (ASCED 2001) [HYRSCHCE]  
Level of highest non-school qualification (ASCED 2001) [LVHNSQCE]  
Main field of highest non-school qualification (ASCED 2001) [MFHNSQCE]

## Educational attendance (full-time) [EDUSTATC]

## EDUCATION

[<< Previous Section: Household and Family](#)

[Next Section: Employment >>](#)

### EDUCATIONAL ATTENDANCE (FULL-TIME)

This data item describes whether someone is currently attending school or a tertiary education institution full-time.

Tertiary education includes University, Technical and Further Education (TAFE) college, or other educational institutions and colleges (excluding primary and secondary/high schools).

Only people aged 15 to 24 years are asked about educational attendance in the Labour Force Survey (LFS). Attending full-time education usually limits labour force participation, and so this data item provides insight into the issues around youth unemployment and participation.

For the educational attendance of people across a broader range of ages, refer to the data item **Educational enrolment** [EDUENROC].

<b>Identifier:</b>	EDUSTATC
<b>Level:</b>	Person

#### EDUCATIONAL ENROLMENT

This data item describes whether someone is currently enrolled in and attending full-time or part-time education.

Education includes University, Technical and Further Education (TAFE) college, or other educational institutions and colleges (including secondary/high schools).

This item is mostly derived from the Survey of Education and Work, Australia (SEW, cat. no. 6227.0), which is held each year in May on seven-eighths of the sample in the Labour Force Survey (LFS) for people aged 15 to 64 years in 2008 and 15 to 74 years in 2009 and 2010.

The data is collected from people across a broader range of ages, unlike the LFS data item **Educational attendance** [EDUSTATC] which is only collected from people aged 15 to 24 years.

Some additional data has also been assembled from the Multipurpose Household Survey, Australia, 2008-09 (MPHS, cat. no. 4100.0) for a small portion in the out-going group of the LFS (the one-eighth of the LFS sample that has been in the survey for the full 8 months) in each month between July 2008 and June 2009. Information obtained in the MPHS is always collected from a selected person via a personal interview, and so does not relate to the data item **Respondent detail** [RESPTYPC], which only relates to the data items collected in the LFS and other supplementary surveys.

## TYPE OF EDUCATIONAL INSTITUTION

This data item describes the type of educational institution that a person is currently enrolled in and attending.

This item is mostly derived from the Survey of Education and Work, Australia (SEW, cat. no. 6227.0), which is held each year in May on seven-eighths of the sample in the Labour Force Survey (LFS) for people aged 15 to 64 years in 2008 and 15 to 74 years in 2009 and 2010.

For months other than May, the data is based on responses to the LFS question on **Educational attendance** [EDUSTATC], which is only collected from people aged 15 to 24 years. These responses are coded as either 'Secondary School' or 'Non-school institution nfd' as no further information is collected on the type of institution in the LFS.

[Next Section: Hours Worked >>](#)

### EMPLOYMENT TYPE

This data item describes someone's type of employment.

It is similar to **Status in employment** [STATEMCE], but provides two further distinctions:

- Employees are split between those with and without paid leave entitlements
- Owner managers (Employers) are split between those who manage incorporated and un-incorporated enterprises.

Owner managers of incorporated enterprises (OMIES) are classified as, and indistinguishable from, employees in the standard data item **Status in employment**. This is because they are employees who work for the corporate entity. Employment type allows for these types of owner managers to be split from employees and analysed separately as employers.

Owner managers of unincorporated enterprises (OMUES) are classified as employers or own account workers (self-employed) in the **Status in employment** data item.

Employees with paid leave entitlements can be regarded as having a permanent position, whereas employees without entitlements generally have temporary or casual jobs, but this is not always the case.

Information on paid leave entitlements is not collected in the monthly Labour Force Survey (LFS) and is derived from the following supplementary surveys:

- Forms of Employment, Australia (FOES, cat. no. 6359.0)  
Every November from the people employed in seven-eighths of the LFS sample
- Labour Mobility, Australia (LMS, cat. no. 6209.0)  
February every 2 years from seven-eighths of the LFS sample
- Multipurpose Household Survey, Australia (MPHS, cat. no. 4100.0)  
Every month since July 2008 from a selected person per household in the out-going group of the LFS (the one-eighth of the LFS sample that has been in the survey for the full 8 months)  
Note: Information obtained in the MPHS is always collected via a personal interview, and so does not relate to the data item **Respondent detail** [RESPTYPC], which only relates to the data items collected in the LFS and other supplementary surveys.

Employees in the LFS who were not selected in a supplementary survey are classified as Employees nfd (not further defined).

## Whether an independent contractor [INDCONTC]

[Contents >>](#) [Employment >>](#) [Whether an independent contractor \[INDCONTC\]](#)

## EMPLOYMENT

[<< Previous Section: Education](#)

[Next Section: Hours Worked >>](#)

## WHETHER AN INDEPENDENT CONTRACTOR

This data item details whether someone is working as an independent contractor or not.

Independent contractors are persons who operate their own business and who contract to perform services for others without having the legal status of an employee (i.e. persons who are engaged by a client). Independent contractors are engaged under a contract for services (a commercial contract), whereas employees are engaged under a contract of service (an employment contract).

Independent contractors' employment may take a variety of forms, for example, they may have a direct relationship with a client or work through an intermediary. Independent contractors may have employees, however they spend most of their time directly engaged with clients or on client tasks, rather than managing their staff.

This item is not collected in the monthly Labour Force Survey (LFS) and is derived from the supplementary survey Forms of Employment, Australia (FOES, cat. no. 6359.0), which is collected every November from the employed people from seven-eighths of the LFS sample.

## Underemployment

Contents >> Underemployment

### UNDEREMPLOYMENT

<< Previous Section: Hours Worked

Next Section: Duration of Employment >>

#### INTRODUCTION

The underemployment data items relate to those who are employed, but are willing and able to work more hours. Details are also provided on the reason for underemployment and whether people who work part-time would prefer, and are available, to work more hours.

Underemployment is only measured in the 'quarterly' labour force survey months: February, May, August and November (the second month of each financial year quarter).

This section contains the following subsection :

Underemployment status [UNDREMP]

Reason worked less than 35 hours [ABSENCEC]

Whether part-time and looking for and available to work more hours [LAMHFUTC]

### UNDEREMPLOYMENT

<< Previous Section: Hours Worked

Next Section: Duration of Employment >>

#### UNDEREMPLOYMENT STATUS

This data item identifies if someone is underemployed

If someone is underemployed full-time, they usually work full-time hours but worked less than 35 this month due to economic reasons (see **Reason worked less than 35 hours** [ABSENCEC]).

If someone is underemployed part-time, they usually work less than 35 hours and are willing and available to work more hours (see **Whether part-time and looking for and available to work more hours** [LAMHFUTC]).

Underemployment is only measured in the 'quarterly' labour force survey months: February, May, August and November (the second month of each financial year quarter).

### WHETHER PART-TIME AND LOOKING FOR AND AVAILABLE TO WORK MORE HOURS

This data item details whether someone who is working part-time is actively looking for more hours in their current job, looking for a second job, or looking for another job that has more hours.

It also provides information on whether they would be available to start working more hours during the reference week or in the next 4 weeks.

People working part-time but not actively looking for more hours are also asked if they would prefer to work more hours, or are happy to continue working less than 35 hours a week.

Only those who were available to start within the next 4 weeks and had actively looked for, or preferred to work, more hours were considered to be underemployed (see **Underemployment status** [UNDREMP]).

This data item is only measured in the 'quarterly' labour force survey months: February, May, August and November (the second month of each financial year quarter).

## Industry and Occupation

Contents >> Industry and Occupation

### INDUSTRY AND OCCUPATION

<< Previous Section: Duration of Employment

Next Section: Income and Earnings >>

#### INTRODUCTION

The industry and occupation data items provide details on the industry and occupation of someone's main job.

If someone is unemployed, details are provided for the industry and occupation of their last job.

Industry and occupation data are only collected in the 'quarterly' labour force survey months: February, May, August and November (the second month of each financial year quarter).

Details are also provided on whether someone is working in the public or private sector, and whether they are currently members of a trade union. These items are not collected in the monthly Labour Force Survey (LFS) and are derived from the supplementary survey Employee Earnings, Benefits and Trade Union Membership, Australia (EEBTUM, cat. no. 6310.0), which is collected every August from the employees in seven-eighths of the LFS sample.

This section contains the following subsection :

- Sector of main job [SECTRMJC]
- Industry of main/last job (ANZSIC 2006 Division) [IND\_06CB]
- Industry of main/last job (ANZSIC 2006 Expanded) [IND\_06CE]
- Occupation of main/last job (ANZSCO 2006 Major group) [OCC\_06CB]
- Occupation of main/last job (ANZSCO 2006 Sub-major group) [OCC\_06CE]
- Trade union membership [TUMMJJC]

## Sector of main job [SECTRMJC]

**INDUSTRY AND OCCUPATION**[<< Previous Section: Duration of Employment](#)[Next Section: Income and Earnings >>](#)**SECTOR OF MAIN JOB**

This data item describes whether someone works in the public or private sectors.

This item is not collected in the monthly Labour Force Survey (LFS) and is derived from the supplementary survey Employee Earnings, Benefits and Trade Union Membership, Australia (EEBTUM, cat. no. 6310.0), which is collected every August from the employees in seven-eighths of the LFS sample

Contents &gt;&gt; Industry and Occupation &gt;&gt; Industry of main/last job (ANZSIC 2006 Division) [IND\_06CB]

**INDUSTRY AND OCCUPATION**[<< Previous Section: Duration of Employment](#)[Next Section: Income and Earnings >>](#)**INDUSTRY OF MAIN/LAST JOB  
(ANZSIC 2006 DIVISION)**

This data item provides details on which industry division someone's main or last job is classified. Industry classification is based on the main economic activity performed in that job or business.

In order to distinguish between whether the industry relates to the current job of someone who is employed or the last job of someone who is unemployed, refer to **Labour force status** [LFSTATCE].

For people who are unemployed and have never worked before (new starter), or last worked over 2 years ago (former worker), industry data is not collected (see **Whether worked full-time for 2 weeks or more** [FTJSTATC]).

Industry divisions are described in detail in the Australian and New Zealand Standard Industry Classification (ANZSIC), 2006 (Revision 1.0) (cat. no. 1292.0).

For more detailed industry data refer to **Industry of main/last job (ANZSIC 2006 Expanded)** [IND\_06CE].

Industry data is only collected in the 'quarterly' labour force survey months: February, May, August and November (the second month of each financial year quarter).

### INDUSTRY AND OCCUPATION

[<< Previous Section: Duration of Employment](#)[Next Section: Income and Earnings >>](#)

#### INDUSTRY OF MAIN/LAST JOB (ANZSIC 2006 EXPANDED)

This data item provides details on which industry sub-division someone's main or last job is classified. Industry classification is based on the main economic activity performed in that job or business.

In order to distinguish between whether the industry relates to the current job of someone who is employed or the last job of someone who is unemployed, refer to **Labour force status** [LFSTATCE].

For people who are unemployed and have never worked before (new starter), or last worked over 2 years ago (former worker), industry data is not collected (see **Whether worked full-time for 2 weeks or more** [FTJSTATC]).

This data item is either 3 or 4 digits in length. The first 1 or 2 digits relate to the industry division (see **Industry of main/last job (ANZSIC 2006 Division)** [IND\_06CB]), where:

- 1 = Division A: Agriculture, Forestry and Fishing
- 2 = Division B: Mining
- 3 = Division C: Manufacturing
- ...
- 19 = Division S: Other Services

The last 2 digits generally relate to the industry sub-divisions as detailed in the Australian and New Zealand Standard Industry Classification (ANZSIC), 2006 (Revision 1.0) (cat. no. 1292.0). In cases where 2 or more sub-divisions have been grouped together, the lowest 2 digit number is used.

Industry data is only collected in the 'quarterly' labour force survey months: February, May, August and November (the second month of each financial year quarter).

#### OCCUPATION OF MAIN/LAST JOB (ANZSCO 2006 MAJOR GROUP)

This data item provides details on which major occupation group someone's main or last job is classified. Occupation classification is based on the skill level, or skill specialisation, required to perform the job.

In order to distinguish between whether the occupation relates to the current job of someone who is employed or the last job of someone who is unemployed, refer to **Labour force status** [LFSTATCE].

For people who are unemployed and have never worked before (new starter), or last worked over 2 years ago (former worker), occupation data is not collected (see **Whether worked full-time for 2 weeks or more** [FTJSTATC]).

Occupation Major Groups are described in detail in the Australian and New Zealand Standard Classification of Occupations (ANZSCO), First Edition, Revision 1 (cat. no. 1220.0).

For more detailed occupation data refer to **Occupation of main/last job (ANZSCO 2006 Sub-major group)** [OCC\_06CE].

Occupation data is only collected in the 'quarterly' labour force survey months: February, May, August and November (the second month of each financial year quarter).

## Income and Earnings

[Contents >> Income and Earnings](#)

### INCOME AND EARNINGS

[<< Previous Section: Industry and Occupation](#)

[Next Section: Unemployment >>](#)

#### INTRODUCTION

The income and earnings data items provide details on the amount of money someone earns in their main job and their personal gross weekly income. Details are also provided on their principal source of income.

Information on income and earnings is not collected in the monthly Labour Force Survey (LFS) and is derived from the following supplementary surveys:

- Employee Earnings, Benefits and Trade Union Membership, Australia (EEBTUM, cat. no. 6310.0)
  - Every August from the employees in seven-eighths of the LFS sample.
  - Relates to the money earned in their main job as an **employee only**, and does not include any other sources of income or earnings.
  - See **Weekly earnings in main job** [WINCMJCE].
- Multipurpose Household Survey, Australia (MPHS, cat. no. 4100.0)
  - Every month from a selected person per household in the out-going group of the LFS (the one-eighth of the LFS sample that has been in the survey for the full 8 months)
  - Information obtained in the MPHS is always collected via a personal interview, and so does not relate to the data item **Respondent detail** [RESPTYPC], which only relates to the data items collected in the LFS and other supplementary surveys.
  - Relates to all income from all sources.
  - See **Current weekly gross personal income from all sources** [WINCALCE].

These two sources of data provide distinctly different measurements of income or earnings, and are never collected from the same person in the same month. They may be collected from the same person in different months for a small number of people in the sample.

This section contains the following subsection :

Current weekly gross personal income from all sources [WINCALCE]  
Weekly earnings in main job [WINCMJCE]  
Main source of income [PRNINCCE]

[Contents >> Income and Earnings >> Current weekly gross personal income from all sources \[WINCALCE\]](#)

### INCOME AND EARNINGS

[<< Previous Section: Industry and Occupation](#)

[Next Section: Unemployment >>](#)

#### CURRENT WEEKLY GROSS PERSONAL INCOME FROM ALL SOURCES

This data item provides the total gross income someone receives in a week. Income is provided in \$100 ranges up to \$2000 per week.

Income includes regular and recurring cash receipts, such as moneys received from wages and salaries, government pensions and allowances, and other regular receipts such as superannuation, workers' compensation, child support, scholarships, profit or loss from own unincorporated business or partnership and property income. Total gross income is the sum of the income from all these sources before income tax or the Medicare levy are deducted.

This item is not collected in the monthly Labour Force Survey (LFS) and is derived from the supplementary survey Multipurpose Household Survey, Australia (MPHS, cat. no. 4100.0), which is collected every month from one selected person per household in the out-going group of the LFS (the one-eighth of the LFS sample that has been in the survey for the full 8 months). Information obtained in the MPHS is always collected via a personal interview, and so does not relate to the data item **Respondent detail** [RESPTYPC], which only relates to the data items collected in the LFS and other supplementary surveys.

#### WEEKLY EARNINGS IN MAIN JOB

This data item provides the total gross earnings someone earns in a week in their main job as an employee. Earnings are provided in \$100 ranges up to \$2000 per week.

This item is not collected in the monthly Labour Force Survey (LFS) and is derived from the supplementary survey Employee Earnings, Benefits and Trade Union Membership, Australia (EEBTUM, cat. no. 6310.0), which is collected every August from the employees in seven-eighths of the LFS sample. Owner managers of incorporated enterprises are also included as employees in the survey.

Total gross earnings is the wage or salary collected as an employee before income tax or the Medicare levy are deducted.

The data collected from the EEBTUM survey only relates to the earnings in their main job as an employee only, and does not include any other sources of income or earnings. For income from all sources, refer to **Current weekly gross personal income from all sources** [WINCALCE].

## Main source of income [PRNINCCE]

[Contents >> Income and Earnings >> Main source of income \[PRNINCCE\]](#)

### INCOME AND EARNINGS

[<< Previous Section: Industry and Occupation](#)

[Next Section: Unemployment >>](#)

#### MAIN SOURCE OF INCOME

This data item describes the main source of income. It relates to the income provided in the total weekly personal income data items.

For **Current weekly gross personal income from all sources** [WINCALCE], collected in the Multipurpose Household Survey, Australia (MPHS, cat. no. 4100.0), the main source of income relates to the greatest contributor of the income in dollar terms to the person's personal income. It does not take account of other income received by their **household**, and the main source of income for the **household** may in fact be a different type of income.

This data item also classifies those employees who reported earnings for **Weekly earnings in main job** [WINCMJCE], collected in Employee Earnings, Benefits and Trade Union Membership, Australia (EEBTUM, cat. no. 6310.0), as 'Employee income.' In EEBTUM only employees are surveyed, and these earnings only relate to their main employee job. Income from all sources is not collected in EEBTUM.

There will be cases where someone's main income source will be from income sources other than employee income (i.e working part-time and also receiving government benefits or superannuation) but as this is not collected in the EEBTUM survey, it can not be identified in this data item - they will be classified as 'Employee income' in all cases. Caution should be taken when using this data item where it relates to earnings in main job as collected in EEBTUM.

#### INTRODUCTION

The unemployment data items provide details on the reason for unemployment, previous work experience and whether someone is looking for a full-time or part-time job.

This section contains the following subsection :

- Full-time or part-time status of unemployment [FTPTUNC]
- Whether worked full-time for 2 weeks or more [FTJSTATC]
- Reason for unemployment (basic) [REASUNCB]
- Reason for unemployment (expanded) [REASUNCE]

Contents >> Unemployment >> Full-time or part-time status of unemployment [FTPTUNC]

### UNEMPLOYMENT

<< Previous Section: Income and Earnings

Next Section: Duration of Unemployment >>

#### FULL-TIME OR PART-TIME STATUS OF UNEMPLOYMENT

This data item describes whether someone who is unemployed is looking for full-time or part-time work.

If someone is looking for any job, regardless of whether it is full-time or part-time, they are reported as looking for full-time work.

<b>Identifier:</b>	<b>FTPTUNC</b>

### UNEMPLOYMENT

<< Previous Section: Income and Earnings

Next Section: Duration of Unemployment >>

#### WHETHER WORKED FULL-TIME FOR 2 WEEKS OR MORE

This data item details whether someone who is unemployed has previous full-time work experience (a 'former worker').

They need to have worked full-time for at least 2 weeks or more to count as having full-time work experience. Details are also provided on whether they last worked full-time in the last 2 years or over 2 years ago.

This item also reveals whether someone is a 'new starter' - someone who has never worked before and is looking for their first job.

### UNEMPLOYMENT

[<< Previous Section: Income and Earnings](#)

[Next Section: Duration of Unemployment >>](#)

#### REASON FOR UNEMPLOYMENT (BASIC)

This data item provides a (simplified) reason for someone's unemployment - whether they were a 'job leaver' or a 'job loser.'

Reason for unemployment is not recorded for people who last worked over 2 years ago ('Former worker') or have never worked before (see **Whether worked full-time for 2 weeks or more** [FTJSTATC]).

More detailed reasons for unemployment are provided in **Reason for unemployment (expanded)** [REASUNCE].

Reason for unemployment data is only collected in the 'quarterly' labour force survey months: February, May, August and November (the second month of each financial year quarter).

## Duration of Unemployment

Contents >> Duration of Unemployment

### DURATION OF UNEMPLOYMENT

<< Previous Section: Unemployment

Next Section: Not in the Labour Force >>

#### INTRODUCTION

The duration of unemployment data items provide details for how long someone has been unemployed, including:

- duration since any previous full-time work; and
- duration since any form of previous work

This section contains the following subsection :

Duration of unemployment (since any previous work - basic) [DURUNCB]  
 Duration of unemployment (since any previous work - expanded) [DURUNCE]  
 Duration of unemployment (since any previous full-time work - basic) [DURUNFCB]  
 Duration of unemployment (since any previous full-time work - expanded) [DURUNFCE]

### DURATION OF UNEMPLOYMENT

[<< Previous Section: Unemployment](#)
[Next Section: Not in the Labour Force >>](#)

#### DURATION OF UNEMPLOYMENT (SINCE ANY PREVIOUS FULL-TIME WORK - BASIC)

This data item identifies whether someone is classed as being 'short-term' or 'long-term' unemployed since their last full-time job. It is based on the number of weeks they have been unemployed and looking for work, disregarding any periods of part-time employment.

If they have never been employed full-time before, the duration is simply the number of weeks they have been looking for their first full-time job.

If they have been unemployed for less than 52 weeks, they are considered to be short-term unemployed. Those that have been looking for a full-time job for 52 weeks or longer are classified as long-term unemployed.

The detailed number of weeks someone has been unemployed since their last full-time job are provided in **Duration of unemployment (since any previous full-time work - expanded) [DURUNFCE]**.

## Not in the Labour Force

[Contents >> Not in the Labour Force](#)

### NOT IN THE LABOUR FORCE

[<< Previous Section: Duration of Unemployment](#)

[Next Section: Retirement >>](#)

#### INTRODUCTION

The Not in the Labour Force (NILF) data items provide details on the status of people not in the labour force, their main activities when not in the labour force, and the reason for leaving the labour force.

Aspects of whether they are marginally attached and may return to the labour force (e.g. 'discouraged job seekers') are also explored.

Most of these detailed items are not collected in the monthly Labour Force Survey (LFS) and are derived from the supplementary survey Persons Not in the Labour Force, Australia (PNILF, cat. no. 6220.0), which is collected every September from those who are not in the labour force in seven-eighths of the LFS sample.

This section contains the following subsection :

Reason for not in the labour force [NLFSTATC]

Main activity when not in the labour force [NLFMNACC]

Whether wanted to work [NLFWWRKC]

Whether available to start work and with marginal attachment [NLFMGATC]

Reason for ceasing last job [REASNLFC]

## REASON FOR CEASING LAST JOB

This data item provides the reason why someone who is no longer in the labour force left their previous job.

This item is not collected in the monthly Labour Force Survey (LFS) and is derived from the supplementary survey Persons Not in the Labour Force, Australia (PNILF, cat. no. 6220.0), which is collected every September from those who are not in the labour force in seven-eighths of the LFS sample.

## INTRODUCTION

The retirement data items provide details on whether someone is retired or not. For those who are not retired, their plans for retirement and the age they intend to retire are provided.

These detailed items are not collected in the monthly Labour Force Survey (LFS) and are derived from the Retirement and Retirement Intentions, Australia (cat. no. 6238.0) topic of the Multipurpose Household Survey, Australia (MPHS, cat. no. 4100.0). The topic is run every 2 years and collected every month over a financial year period from a selected person per household in the out-going group of the LFS (the one-eighth of the LFS sample that has been in the survey for the full 8 months). The periods that relate to this release of the CURF are July 2008 to June 2009 and July 2010 to December 2010.

Note: Information obtained in the MPHS is always collected via a personal interview, and so does not relate to the data item **Respondent detail** [RESPTYPC], which only relates to the data items collected in the LFS and other supplementary surveys.

This section contains the following subsection :

- Retirement status [RETSTATC]
- Age intends to retire [RETAGEC]
- Intentions to retire from the labour force [RETPLANC]

#### RETIREMENT STATUS

This data item identifies whether someone who is not in the labour force is retired. Those who aren't retired provide their intentions on whether they intend to return to full-time or part-time work.

This data item is not collected in the monthly Labour Force Survey (LFS) and is derived from the Retirement and Retirement Intentions, Australia (cat. no. 6238.0) topic of the Multipurpose Household Survey, Australia (MPHS, cat. no. 4100.0). The topic is run every 2 years and collected every month over a financial year period from a selected person per household in the out-going group of the LFS (the one-eighth of the LFS sample that has been in the survey for the full 8 months). The periods that relate to this release of the CURF are July 2008 to June 2009 and July 2010 to December 2010.

Note: Information obtained in the MPHS is always collected via a personal interview, and so does not relate to the data item **Respondent detail** [RESPTYPC], which only relates to the data items collected in the LFS and other supplementary surveys.

## Weighting and Benchmarks

[Contents >> Weighting and Benchmarks](#)

### WEIGHTING AND BENCHMARKS

[<< Previous Section: Retirement](#)

[Next Section: Conditions of Use >>](#)

#### INTRODUCTION

This section details the weighting and benchmark data items used in the CURF.

Weights are provided per person for each month as a point in time measure that corresponds to the labour force estimates published in that month.

Population benchmarks are provided per benchmarking strata for each month to help customise weights to suit longitudinal analysis.

For more information, refer to Population benchmarks in Survey Methodology and Weighting in File Structure.

This section contains the following subsection :

- Weight for the current month [WEIGHT]
- Population count [POPCNTC]

[Previous Page](#)

[Next Page](#)

## Weight for the current month [WEIGHT]

## WEIGHTING AND BENCHMARKS

[<< Previous Section: Retirement](#)
[Next Section: Conditions of Use >>](#)

### WEIGHT FOR THE CURRENT MONTH

This data item provides the weight assigned to each respondent for a given month. This allows estimates to be created relating to the Australian population, rather than the numbers of people in the sample.

These weights are provided as continuous variables with up to 8 decimal places. The average weight is about 350, but it ranges from 15 to 1800.

These are the same weights used to produce the estimates in the main Labour Force, Australia publications (cat. no. 6202.0, 6291.0.55.001 and 6291.0.55.003). They are based on counts of the civilian population aged 15 years and over, as derived from the Estimated Resident Population (ERP) published in Australian Demographic Statistics (cat. no. 3101.0). The weights are calibrated based on the following benchmarking strata:

- **Sex** [SEX],
- **Age group** [AGECB],
- **State or territory of usual residence** [STATURCE], and
- Sub-state region of usual residence (Note: sub-state regional data is not provided on this CURF).

These weights have also been calculated using composite estimation across the prior 6 months in order to take advantage of the high correlation between overlapping samples across months in the Labour Force Survey (LFS). For more information on composite estimation, refer to Estimation Method and Information Paper: Forthcoming Changes to Labour Force Statistics, 2007 (cat. no. 6292.0).

The weights in this data item do not correspond to the weights used to produce estimates in the supplementary surveys - these are calculated using different benchmarks, estimation methods, and population exclusions.. When calculating estimates based on supplementary survey data items using the weights in this CURF, they may not match official estimates produced in the publications corresponding to those supplementary surveys.

For more information, refer to Population benchmarks in Survey Methodology and Weighting in File Structure.

For a respondent who is in the labour force survey for the full 8 months cycle, they will have a corresponding weight for each month. These weights are then useful for calculating cross-sectional estimates, as they correspond to each 'point in time' (see **Survey month ID** [ABSMID]).

For longitudinal analysis, there are a few different ways of calculating estimates based on the weights provided. These include:

- Using a single representative weight for each person from the available weights provided. This could be the weight from the first, last, or middle month of a given span of analysis.
- Using an average of all the monthly weights provided for each person.
- Producing customised weights based on the original population counts provided (see **Population count** [POPCNTC]).

### POPULATION COUNT

This data item provides the population count of the benchmarking group that a person belongs to for the current month. This allows customised weights to be calculated in order to create estimates relating to the Australian population, rather than the numbers of people in the sample.

These population counts are provided as discrete variables (whole numbers, no decimal places). The counts range from 1400 to 40 000, depending on the

group. They are based on counts of the civilian population aged 15 years and over, as derived from the Estimated Resident Population (ERP) published in Australian Demographic Statistics (cat. no. 3101.0).

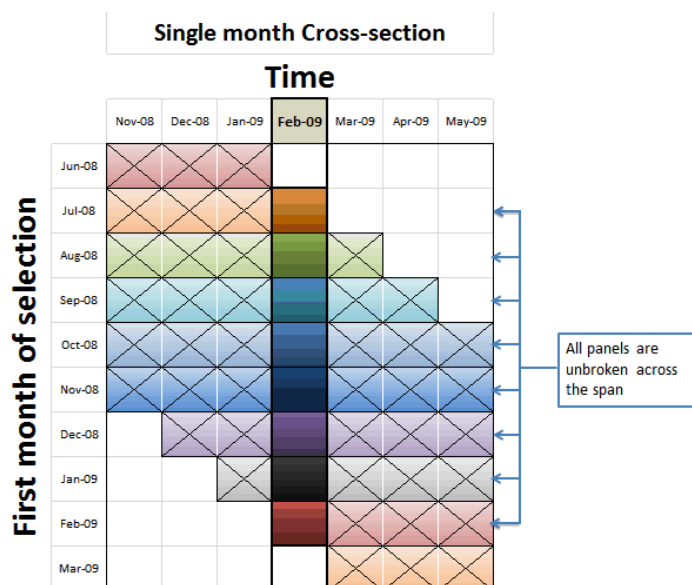

The population counts are broken down into the following benchmarking groups:

- Sex [SEX] by
- Age group [AGECB] by
- State or territory of usual residence [STATURCE]

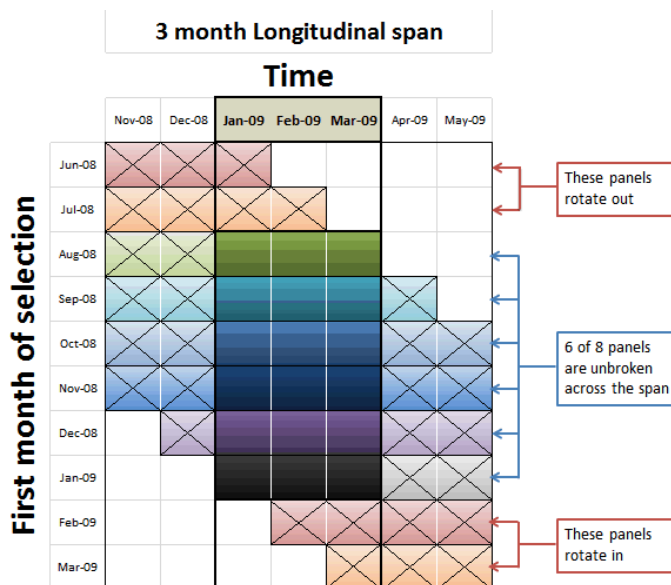

These population counts are the same as those used to produce the estimates in the main Labour Force, Australia publications (cat. no. 6202.0, 6291.0.55.001 and 6291.0.55.003), however, they are not broken down by Sub-state region of usual residence (see **Weight for the current month** [WEIGHT]). Furthermore, the population counts are not related to the benchmarks or estimation processes used in the supplementary surveys - these are based on different population exclusions and estimation methods.

For more information, refer to Population benchmarks and Estimation method in Survey Methodology and Weighting in File Structure.

For a respondent who is in the labour force survey for the full 8 months cycle, they will have a corresponding population count for their group in each month. These can be used to recalculate simplified single month cross-sectional weights that don't involve the sub-state regional benchmarking groups or the composite estimation techniques used in the Labour Force Survey (LFS). Estimates produced using these population counts will not exactly match official published estimates, but they will be at similar levels.

The population counts are mainly provided to facilitate the re-calculation of customised weights for different longitudinal time spans, ranging from 2 to 8 months. For example, when considering the 3 month span between January 2009 and March 2009, 2 of the 8 panels are rotated out of the sample and replaced with 2 new groups, leaving only 6 of the 8 panels unbroken across the 3 month span. Furthermore, people who move out of dwellings in sample and people responding from special dwellings are also lost from the common sample across the span. If the **Weight** [WEIGHT] is used to produce estimates for this time span, they won't add up to represent the Australian population, as over one quarter of the sample is missing. Refer to Longitudinal structure for more information.

By using the population counts provided, new weights for each of the remaining records in the common sample can be recalculated. Typically, the count for February 2009 (the middle month) would be representative for the time span, although the counts for January or March would also be equally valid, depending on the analysis (an average of the 3 months could also be used, but this is likely to closely match the February counts). The recalculated weights would be larger than the cross-sectional ('point-in-time') weights provided, as they need to be inflated to compensate for the lost sample. Using these new custom weights, estimates that represent the Australian population can be produced.

However, beware of the increased error associated with the reduced sample of a longitudinal span, and, more importantly, the significant bias in this kind of analysis. People who reside in private dwellings and consistently respond to the survey each month are generally more stably employed. People who drop out

of sample, move to new dwellings or respond from special dwellings (particularly prisons, hospitals, nursing homes) are more likely to be NILF or unemployed. When these responses are lost from a longitudinal span and not included in the analysis, there is a significant bias towards employment.

QUALITY DECLARATION

Institutional Environment

Confidentialised Unit Record Files (CURFs) are released in accordance with the conditions specified in the Statistics Determination section of the **Census and Statistics Act 1905 (CSA)**. This ensures that confidentiality is maintained whilst enabling micro level data to be released. More information on the confidentiality practices associated with CURFs can be found on the About CURF Microdata page.

For information on the institutional environment of the Australian Bureau of Statistics (ABS), including the legislative obligations of the ABS, financing and

governance arrangements, and mechanisms for scrutiny of ABS operations, please see ABS Institutional Environment.

## Relevance

Longitudinal microdata from the Labour Force Survey (LFS) are available as a Confidentialised Unit Record File (CURF) via the Remote Access Data Laboratory (RADL) and ABS Data Laboratory (ABSDL). The microdata contains information on labour force status, employment status, hours worked, underemployment status, industry and occupation of main/last job, income and earnings, unemployment status, duration of unemployment, not in the labour force (NILF) status, retirement status, as well as relevant standard demographic, family, educational, and other details and characteristics.

The level of detail provided for data items are available within the Data Item List. An Excel spreadsheet and a plain text file of the data item list is available in Downloads.

## Timeliness

The Labour Force Survey has been conducted every month throughout Australia since February 1978.

For this first release, the 2008-10 Longitudinal LFS microdata has been released in December 2012, two years after the last period of enumeration. It is expected that future releases of the LLFS CURF will have similar lag times between enumeration and release, as sufficient time is required to collect and analyse all of the longitudinal panels, including the ones that commence in the last period of enumeration. For example, before the next release of 2011 LLFS microdata, the panel that spans December 2011 to July 2012 must first be collected and analysed, which results in at least an 8 month delay.

Furthermore, time is also required to establish stable estimates of population benchmarks before release. This is to ensure that estimates from the LLFS CURF remain coherent with the main Labour Force, Australia publications (cat. no. 6202.0, 6291.0.55.001 and 6291.0.55.003) and the final revised estimates of Estimated Resident Population (ERP) published in Australian Demographic Statistics (cat. no. 3101.0).

## Accuracy

The Labour Force Survey is based on a sample of private dwellings (approximately 29,000 houses, flats etc) and non-private dwellings, such as hotels and motels. The sample covers about 0.33% of the Australian civilian population aged 15 years or over. The Labour Force Survey is designed primarily to provide estimates of key labour force statistics for the whole of Australia and, secondarily, for each state and territory.

The longitudinal microdata generally contains finer levels of detail of data items than what is published in the main Labour Force, Australia publications (cat. no. 6202.0, 6291.0.55.001 and 6291.0.55.003). For more information on the level of detail provided, refer to the Data Item List.

Steps to confidentialise the data made available on the LLFS CURF are taken in such a way as to maximise the usefulness of the content while maintaining the confidentiality of respondents selected in the survey. As a result, it may not be possible to exactly reconcile all the statistics produced from the microdata with other published statistics. Further information about the steps taken to confidentialise the microdata is available in the User Manual: Responsible Use of ABS CURFs (cat. no. 1406.0.55.003)

## Coherence

The ABS has been conducting the LFS each month since February 1978. While seeking to provide a high degree of consistency and comparability over time by minimising changes to the survey, sound survey practice requires careful and continuing maintenance and development to maintain the integrity of the data and the efficiency of the collection.

The changes which have been made to the LFS have included changes in sampling methods, estimation methods, concepts, data item definitions, classifications, and time series analysis techniques. In introducing these changes the ABS has generally revised previous estimates to ensure consistency and coherence with current estimates. For a full list of changes made to the LFS, see Chapter 20 - Labour Force Survey in Labour Statistics: Concepts, Sources and Methods (cat. no. 6102.0.55.001).

The only significant change to the LFS during 2008 to 2010 was the 24% reduction in the LFS sample size for the period July 2008 to August 2009, relative to the June 2008 sample size. The sample reduction was reversed from September 2009 to December 2009, with December 2009 estimates being the first produced under the fully reinstated sample. As a result, there is a reduced number of records and longitudinal panels in the LLFS CURF across this time period.

## Interpretability

The information within this product should be referred to when using the microdata. It contains information including Survey Methodology, File Structure, Using the CURF, Conditions of Use and the Data Item List.

Further information can also be found in the Understanding Labour Force article and the Explanatory Notes section of Labour Force, Australia (cat. no. 6202.0), as well as the publication Labour Statistics: Concepts, Sources and Methods (cat. no. 6102.0.55.001).

## Accessibility

Microdata products are available to approved users. Users wishing to access the microdata should read the How to Apply for Microdata web page, before applying for access through MiCRO. Users should also familiarise themselves with information available via the Microdata web pages.

A full list of available microdata can be viewed via the List of expected and available Microdata. More detail regarding types and modes of access to CURFs can be found on the CURF Access Modes and Levels of Detail web page.

The LLFS CURF can be accessed through the Remote Access Data Laboratory (RADL) and the ABS Data Laboratory (ABSDL).

Any questions regarding access to microdata can be forwarded to [microdata.access@abs.gov.au](mailto:microdata.access@abs.gov.au) or phone (02) 6252 7714.
